In this book, the technical explanation of the nature of analog sound creation is followed by the story of its birth and its subsequent development by various designers, manufacturers and performers. The individual components of analog sound creation are then examined in detail, with step by step examples of sound creation techniques. Then the modern imitative analog instruments are examined, again with detailed instructions for programming and using them, and the book is completed with appendices listing the major instrument lines available, hints on values and purchasing, other sources of information, and a discography of readily available recordings which give good examples of analog sound synthesis. The CD which accompanies the book gives many examples of analog sound creation basics as well as more advanced techniques, and of the abilities of the individual instruments associated with classical and with imitative analog sound synthesis.

'One of the best books ever written about sailing' Time 27,000 miles, three and a half to five months alone at sea, chilling casualty rates, the unrelenting strain of handling 60-foot boats day and night, the absolute certainty of weather and waves that could destroy them. On 3 November 1996 sixteen sailors set out from the Bay of Biscay to embark on the Vendee Globe - a single-handed yacht race through the world's most treacherous and isolated seas. Of the sixteen starters only six completed the course, six others withdrew or were disqualified, three were plucked from sinking boats and one disappeared without trace. This is a book about the sea: how we are drawn to it and how it repels us and about why these men and women risk everything to embark on such a perilous journey. TWENTIETH ANNIVERSARY EDITION, WITH A NEW FOREWORD FROM THE AUTHOR.

Beginning Bass for Adults Taylor & Francis

"A theory is presented for the explanation of human learning behavior in a manual control task. In the performance of a psychomotor task, a human operator responds to sensory stimuli with limb movements. This psycho-physiological phenomenon is conceptualized herein as a single channel information processing system. A sensor, a decision center and an effector are the serially connected components of the system. Transmission and processing of information expend time, and the delay between the reception of a finite sum of component times which are assumed to be statistically independent random variables. In the decision center responses are selected from a set of possible alternatives. Stored in memory are apriori estimates of the probability that a specific response should be enforced at the moment of decision. Response selection is determined by a rule which takes the priors into account. Learning is effected by a revision of the priors based on the weighting of certain evidence. Readily perceived events in the state history of the dynamic process being controlled are used for evidence in resolving control policy uncertainty. Bayes' theorem is the revision rule. The model of human learning behavior is a computer program obtained from a translation of the theory into machine language. Behavior of the model depends not only on the rules of information processing postulated by the theory, but also on a set of parameters characterizing the mental and physical attributes of an individual human operator. Model behavior is compared with subject behavior measured in a motor skill experiment performed at MIT's Man Vehicle Laboratory. As set forth, the theory explains how a human operator learns to regulate the state of a dynamic process using a relay controller. Generalization of the theory to other task contexts is discussed."--Abstract.

The Music Producer's Handbook Temple University Press

Composer of more than 100 jazz pieces, three-time Grammy nominee, and performer on more than 125 albums, Jimmy Heath has earned a place of honor in the history of jazz. Over his long career, Heath knew many jazz giants such as Charlie Parker and played with other innovators including John Coltrane, Miles Davis, and especially Dizzy Gillespie. Heath also won their respect and friendship. In this extraordinary autobiography, the legendary Heath creates a "dialogue" with musicians and family members. As in jazz, where improvisation by one performer prompts another to riff on the same theme, I Walked with Giants juxtaposes Heath's account of his life and career with recollections from jazz giants about life on the road and making music on the world's stages. His memories of playing with his equally legendary brothers Percy and Albert (aka "Tootie") dovetail with their recollections. Heath reminisces about a South Philadelphia home filled with music and a close-knit family that hosted musicians performing in the city's then thriving jazz scene. Milt Jackson recalls, "I went to their house for dinner...Jimmy's father put Charlie Parker records on and told everybody that we had to be quiet till dinner because he had Bird on.... When I [went] to Philly, I'd always go to their house." Today Heath performs, composes, and works as a music educator and arranger. By turns funny, poignant, and extremely candid, Heath's story captures the rhythms of a life in jazz.
