Photography: Birds explains how to photograph birds--whether in your backyard or at a birding destination--detailing unique issues that confront photographers of all levels and providing the best guidance for capturing the beauty and splendor of our feathered friends. Gerrit Vyn, an award-winning bird photographer, videographer, and sound recorder, has become renowned for his ability to capture birds, especially for the prestigious Cornell Lab of Ornithology. In this new guide, he reveals his methods and shares how to photograph birds based on location, behavior, identification, and storytelling. Vyn details the range of technical considerations, giving clear instruction and advice, as well as the creative decisions a photographer must make on lighting, framing, timing, and motion. He also discusses situations unique to bird photographers: dealing with habituated or tame birds, approaching feeders, utilizing blinds, and more. Once captured, digital images can be digitally refined, so Vyn delves into the procedures that elevate an image from mundane to striking, using Adobe Lightroom. Throughout, Vyn emphasizes an ethical approach to observing and interacting with the birds around us.

The consequences of drug use, whether illicit or prescribed. Consequences that can be enduring, lifelong, even carry through generations. Yet few of us have the time to consider them as we live in the heat of our own daily lives. I have seen this in action, watched events while they happened, seen it unfold, lived through the results, and unfortunately am observing the ongoing calamities of it all, still today. It is not fun to watch but not mine to fix. I was and am an observer, a recorder, merely that, out of the action, incapable of altering the results. My wife made a great point on this novels subject. Drug use she said is a leveler. It brings people down the lowest common denominator. What a concept! How right on is that statement! Drugs affect the rich, the poor, the famous, and the infamous in every country and nationality on this earth. If you are on the upscale end drugs keep you there. The users life contribution to humanity is likely to be nothing, but the cost to the user, their family and friends in physical, emotional, and fiscal terms expensive and of course dangerous, because it may also kill you. I have put these observations into this novel hoping that readers can

identify with the characters, watch them grow and suffer through the consequences of their actions unaware of the effect of their lives and on others.

This highly anticipated new graphic novel from Manuele Fior (The Interview and 5,000 KM Per Second) showcases his singular talents as a once-in-a-generation visual artist and a deeply empathetic writer who uses science fiction to look to the future of humanity. The "Great Invasion" originated from the sea. It moved north across the mainland. Many fled, while some took refuge on a small concrete island called Celestia, built over a thousand years ago. Now cut off from the mainland, Celestia has become an outpost for criminals and other misfits, as well as a refuge for a group of young telepaths. Events push two of them, Dora and Pierrot, to flee the island and set sail to the mainland. There, they discover a world on the precipice of a metamorphosis, though

also a world where adults are literally prisoners of their own fortresses, unintentionally preserving the "old world" at a time when a new generation could guide society towards a better humanity. Celestia is the most ambitious and successful graphic novel to date by one of the world's most exciting storytellers.

Portraits and landscapes from the cinematographer famed for his work with Sam Mendes and the Coen brothers This is the first monograph by the legendary Oscar-winning cinematographer Sir Roger Deakins (born 1949), best known for his collaborations with directors such as the Coen brothers, Sam Mendes and Denis Villeneuve. It includes previously unpublished black-and-white photographs spanning five decades, from 1971 to the present. After graduating from college Deakins spent a year photographing life in rural North Devon, in Southwest England, on a commission for the Beaford Arts Centre; these images are gathered here for the first time and attest to a keenly ironic English sensibility, while also documenting a vanished postwar Britain. A second suite of images expresses Deakins' love of the seaside. Traveling for his cinematic work has allowed Deakins to photograph landscapes all over the world; in this third group of images, that same irony remains evident.

In 1865 James Clerk Maxwell (1831 - 1879) published this work, "A Dynamical Theory of the Electromagnetic Field" demonstrating that electric and magnetic fields travel through space as waves moving at the speed of light. He proposed that light is an undulation in the same medium that is the cause of electric and magnetic phenomena. The unification of light and electrical phenomena led him to predict the existence of radio waves. Maxwell is also regarded as the founding scientist of the modern field of electrical engineering. His discoveries helped usher in the era of modern physics, laying the foundation for such fields as special relativity and quantum mechanics. Many physicists regard Maxwell as the 19th-century scientist having the greatest influence on

20th-century physics. His contributions to physics are considered by many to be of the same magnitude as the ones of Isaac Newton and Albert Einstein. In this original treatise Maxwell introduces the best of his mind in seven parts, to include: Part i. introductory. Part ii. on electromagnetic induction. Part iii. general equations of the electromagnetic field. Part iv. mechanical actions in the field. Part v. theory of condensers. Part vi. electromagnetic theory of light. Part vii. calculation of the coefficients of electromagnetic induction

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs
