Increasing numbers of ecologists and conservation biologists have begun to explore the use of drone technology to obtain accurate and up-to-date data on the distribution and density of species, as well as the threats to their habitats, in their ongoing attempts to conserve and monitor biodiversity. Conservation drones are low-cost, autonomous, and operator-friendly unmanned aerial vehicles that can be used for surveying, mapping, and monitoring both habitat and biodiversity. They are fast becoming a valuable complement to ground-based surveys and satellite imagery for a wide range of ecological and conservation applications. The authors pioneered the use of conservation drones for the purpose of monitoring orangutan populations in Southeast Asia. They subsequently founded ConservationDrones.org to share their knowledge of building and using drones with colleagues in the wider environmental community. This website has proved highly popular and this book aims to further build capacity to use drones and inspire others to adapt emerging technologies for practical conservation.

Essays on photography and the medium's history and evolving identity. In Each Wild Idea, Geoffrey Batchen explores a wide range of photographic subjects, from the timing of the medium's invention to the various implications of cyberculture. Along the way, he reflects on contemporary art photography, the role of the vernacular in photography's history, and the Australianness of Australian photography. The essays all focus on a consideration of specific photographs—from a humble combination of baby photos and bronzed booties to a masterwork by Alfred Stieglitz. Although Batchen views each photograph within the context of broader social and political forces, he also engages its own distinctive formal attributes. In short, he sees photography as something that is simultaneously material and cultural. In an effort to evoke the lived experience of history, he frequently relies on sheer description as the mode of analysis, insisting that we look right at—rather than beyond—the photograph being discussed. A constant theme throughout the book is the question of photography's past, present, and future identity.

A riveting retrospective of the imaginative photographs created by contemporary artist Abelardo Morell Over the past twenty-five years,

Abelardo Morell (b. 1948) has earned international praise for his images that use the language of photography to explore visual surprise and wonder. Born in Havana, Cuba, Morell came to the United States as a teenager in 1962 and later studied photography, earning an MFA from Yale University. He gained attention for intimate, black-and-white pictures of domestic objects from a child's point of view, inspired by the birth of his son in 1986, as well as images in which he turns a room into a giant camera obscura, projecting exterior views onto interior spaces; and photographs of books that revel in their sensory materiality. In more recent years, he has turned to color, exploring the camera obscura with a painterly delight and innovating a tent camera that projects outdoor scenes onto a textured ground. Across his career, Morell has approached photography with remarkable wit and creativity, examining everyday objects with childlike curiosity. The first in-depth treatment in fifteen years, this handsome and important book examines Morell's career to the present day, including his earlier works in black-and-white and never before published color photographs from the past decade. An essay by Elizabeth Siegel, along with a recent interview with the artist and an illustrated chronology of his life and works, offers a riveting portrait of this contemporary photographer and his ongoing artistic endeavors.
