nurses on how to incorporate the knowledge, skills, and tools of Strength-Based Nursing Care (SBC) into everyday practice. The text, based on a model developed by the McGill University Nursing Program, signifies a paradigm shift from a deficit-based model to one that focuses on individual, family, and community strengths as a cornerstone of effective nursing care. Individuals with disabilities, chronic conditions, and functional impairments need a range of services and supports to keep living independently. However, there often is not a strong link between medical care provided in the home and the necessary social services and supports for independent living. Home health agencies and others are rising to the challenges of meeting the needs and demands of these populations to stay at home by

exploring alternative models of care and payment approaches, the best use of their workforces, and technologies that can enhance independent living. All of these challenges and opportunities lead to the consideration of how home health care fits into the future health care system overall. On September 30 and October 1, 2014, the Institute of Medicine and the National Research Council convened a public workshop on the future of home health care. The workshop brought together a spectrum of public and private stakeholders and thought leaders to improve understanding of the current role of Medicare home health care in supporting aging in place and in helping high-risk, chronically ill, and disabled Americans receive health care in their communities. Through presentations and discussion, participants explored the evolving role of Medicare home health care in caring for Americans in the future, including how to integrate Medicare home health care into new models for the delivery of care and the future health care marketplace. The workshop also considered the key policy reforms and investments in

---

workforces, technologies, and research needed to leverage the value of home health care to support older Americans, and research priorities that can help clarify the value of home health care. This summary captures important points raised by the individual speakers and workshop participants.

Despite sustained debate and progress the evolving thing that is evidence based nursing or practice (EBP) continues to dangle a variety of conceptual and practical loose threads. Moreover, when we think about what is being asked of students

and registered or licenced practitioners in terms of EBP, it is difficult not to concede that this 'ask' is in many instances quite large and, occasionally, it may be unachievable. EBP has and continues to improve patient, client and user care. Yet significant questions concerning its most basic elements remain unresolved and, if nurses are to contribute to the resolution or reconfiguration of these questions then, as a first step, we must acknowledge their existence. From a range of international standpoints and perspectives, contributors to this book focus on aspects of EBP that require development. This focus is always robust and at times it is

unashamedly provocative.

Contributors challenge readers to engage with anomalies that surround the subject and readers are asked to consider the often precarious assumptions that underpin key aspects of EBP. While both conflict and concord are evident among the various offerings presented here, the book nonetheless creates and sustains a narrative that is bigger or more substantial than the sum of individual parts. And, across contributions, a self-assuredly critical stance towards EBP as currently practiced, conceptualized and taught coexists alongside respectful admiration for all who make it happen. Lippincott Williams & Wilkins "Research methodology is a dynamic enterprise. Even after writing 10 editions of this book, we have continued to draw new material and inspiration from ground-breaking advances in research methods and in nurse

researchers' use of those methods.

It is thrilling to share many of those developments in this new edition. We expect that many of the new methodologic and technological enhancements will be translated into powerful evidence for nursing practice. Four years ago, we considered the 10th edition as a watershed edition of a classic textbook, having added two new chapters. We are persuaded, however, that this 11th edition is even better than the previous one. We have retained many features that made this book a classic textbook and resource, including its focus on research as a support for evidence-based nursing, but have introduced important innovations that we

hope will help to shape the future of nursing research"--
