## **Politics, Lies and Conspiracy Theories**

Houghton Mifflin Harcourt

A noted philosopher proposes a naturalistic (rather than supernaturalistic) way to solve the "really hard problem": how to live in a meaningful way—how to live a life that really matters—even as a finite material being living in a material world. If consciousness is "the hard problem" in mind science—explaining how the

amazing private world of consciousness emerges from neuronal activity—then "the really hard problem," writes Owen Flanagan in this provocative book, is explaining how meaning is possible in the material world. How can we make sense of the magic and mystery of life naturalistically, without an appeal to the supernatural? How do we say truthful and enchanting things about being human if we accept the fact that we are finite material beings living in a

material world, or, in Flanagan's description, short-lived pieces of organized cells and tissue? Flanagan's answer is both naturalistic and enchanting. We all wish to live in a meaningful way, to live a life that really matters, to flourish, to achieve eudaimonia—to be a "happy spirit." Flanagan calls his "empirical-normative" inquiry into the nature, causes, and conditions of human flourishing eudaimonics. Eudaimonics, systematic philosophical investigation that is

---

continuous with science, is the naturalist's response to those who say that science has robbed the world of the meaning that fantastical, wishful stories once provided. Flanagan draws on philosophy, neuroscience, evolutionary biology, and psychology, as well as on transformative mindfulness and self-cultivation practices that come from such nontheistic spiritual traditions as Buddhism, Confucianism, Aristotelianism, and Stoicism, in his quest. He gathers from these disciplines

knowledge that will help us understand the nature, causes, and constituents of well-being and advance human flourishing. Eudaimonics can help us find out how to make a difference, how to contribute to the accumulation of good effects—how to live a meaningful life. Red Dragon Wiley-Blackwell

Reflecting the need for even minor programming

in today's model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work. The text presents generalized linear multilevel models from a Bayesian perspective, relying on a simple logical interpretation of Bayesian probability and maximum entropy. It covers from the basics of regression to

---

multilevel models. The author also discusses measurement error, missing data, and Gaussian process models for spatial and network autocorrelation. By using complete R code examples throughout, this book provides a practical foundation for performing statistical inference. Designed for both PhD students and seasoned professionals in the natural and social sciences, it prepares them for more advanced or specialized statistical modeling. Web Resource The book is accompanied by an R package (rethinking) that is available on

the author's website and GitHub. The two core functions (map and map2stan) of this package allow a variety of statistical models to be constructed from standard model formulas.

*The Four Loves* is a 1960 book by C. S. Lewis which explores the nature of love from a Christian and philosophical perspective through thought experiments. The book was based on a set of radio talks from 1958 which had been criticized in the U.S. at the time for their frankness about sex. C.S. Lewis

examines storge or empathy love; philia, friendship love; eros, romantic love; and agape, or God love. Excerpt: "GOD is love," says St. John. When I first tried to write this book I thought that his maxim would provide me with a very plain highroad through the whole subject. I thought I should be able to say that human loves deserved to be called loves at all just in so far as they resembled that Love which is God."

Hebraic Literature Harper Collins

A world-class thinker counts the 100 ways in which humans behave irrationally, showing us what we can do to recognize and minimize these "thinking

errors" to make better decisions and have a better life. Despite the best of intentions, humans are notoriously bad—that is, irrational—when it comes to making decisions and assessing risks and tradeoffs.

Psychologists and neuroscientists refer to these distinctly human foibles, biases, and thinking traps as "cognitive errors." Cognitive errors are systematic deviances from rationality, from optimized, logical, rational thinking and behavior. We make these errors all the time, in all sorts of situations, for problems big and small: whether to choose the

apple or the cupcake; whether to keep retirement funds in the stock market when the Dow tanks, or whether to take the advice of a friend over a stranger. The "behavioral turn" in neuroscience and economics in the past twenty years has increased our understanding of how we think and how we make decisions. It shows how systematic errors mar our thinking and under which conditions our thought processes work best and worst. Evolutionary psychology delivers convincing theories about why our thinking is, in fact, marred. The neurosciences

---

can pinpoint with increasing precision what exactly happens when we think clearly and when we don't. Drawing on this wide body of research, *The Art of Thinking Clearly* is an entertaining presentation of these known systematic thinking errors--offering guidance and insight into everything why you shouldn't accept a free drink to why you SHOULD walk out of a movie you don't like it to why it's so hard to predict the future to why shouldn't watch the news. The book is organized into 100 short chapters, each covering a single cognitive error, bias, or

heuristic. Examples of these concepts include: Reciprocity, Confirmation Bias, The It-Gets-Better-Before-It-Gets-Worse Trap, and the Man-With-A-Hammer Tendency. In engaging prose and with real-world examples and anecdotes, *The Art of Thinking Clearly* helps solve the puzzle of human reasoning.

Facilitator's Guide to Participatory Decision-Making  
Cambridge University Press  
Is it ever all right to lie? A philosopher looks at lying and

deception in public and private life—in government, medicine, law, academia, journalism, in the family and between friends. Lying is a penetrating and thoughtful examination of one of the most pervasive yet little discussed aspects of our public and private lives. Beginning with the moral questions raised about lying since antiquity, Sissela Bok takes up the justifications offered for all kinds of lies—white lies, lies to the sick and dying, lies of parents to children, lies to enemies, lies to protect clients and peers. The consequences of such lies are then explored through a number of concrete situations in which people are involved, either as liars or as the victims of a lie.

Everyone wants to be successful. The problem, though, is that most people misunderstand what constitutes true success. The world defines success in terms of our accomplishments, the fame and fortune we achieve, and the recognitions we receive, all of which are fleeting and temporary successes at best. True success, however, is based upon our character, the relationship we have with God, and the glory God receives

from our lives. So how do we achieve this level of success? Lessons from Solomon answers this question by looking at the life of King Solomon, a man who not only achieved success by the world's standards but also had—and lost—true success that comes from knowing God. Author Glen A. Blanscet has penned engaging narrative retellings of King Solomon's story from the Bible, and from King Solomon's story we learn several "success lessons" that we can apply in our own search for true success in life. Based on the life of Solomon, Blanscet has distilled from
