Anatomy of the lymphatic system There is much more to the lymphatic system than the network of vessels and nodes with which it is most commonly associated. Indeed

there are several organs of the body that connect the lymphatic and immune systems together. Let's start with one that many would not associate with the lymphatic system – Bone Marrow.

The lymphatic system is a series of vessels and nodes that collect and filter excess tissue fluid (lymph), before returning it to the venous circulation. It forms a vital part of the body's immune defence. In this article, we shall look at the components of the lymphatic system, their structure and their clinical correlations.

Lymphatic System Diagrams Honors Anatomy

The lymphatic system, or lymphoid system, is an organ system in vertebrates that is part of the circulatory system and the immune system. It is made up of a large network of lymphatic vessels, lymphatic or lymphoid organs, and lymphoid tissues. The vessels carry a clear fluid called lymph (the Latin word *lymph*a refers to the deity of fresh water, "Lympha") towards the heart.

...

Figure 1. Anatomy of the Lymphatic System.

Lymphatic vessels in the arms and legs convey lymph to the larger lymphatic vessels in the torso. A major distinction between the lymphatic and cardiovascular systems in humans is that lymph is not actively pumped by the heart, but is forced through the

vessels by the movements of the body, the contraction of skeletal muscles during body movements ...
