This volume brings together ten papers, all presented at the 8th International Conference on the Structure of Hungarian (New York City, 2007), addressing a wide range of topics in the morphology, phonetics, phonology, pragmatics, semantics, and syntax of Hungarian, with discussion of related facts in other languages as well. The volume includes an analysis of the morphophonology of the infinitival suffix in Optimality Theory, a plea for a phonetically-grounded theory of phonology based on partial neutralization of the v/f contrast, a Government Phonology account of vowel/zero alternations, a discussion of the recursive nature of speech prosody, a context-structure perspective on the pragmatics of polarity particles, a novel outlook on the prosody, semantics, and syntax of negative quantifiers, a structural approach to the difference between factive and non-factive

complements and the distribution of the clausal expletive *azt*, a pioneering study of the licensing and position of overt nominative subjects of infinitival complement clauses, a lexicalist perspective on the distribution of ablative cause-PPs in anti-causative constructions, and an analysis of the complicated morphosyntax of adpositional preverbs and their doubling in terms of partial chain reduction in a phase-based cyclic mapping of syntax to phonology. The volume will be of interest not just to scholars working on Hungarian, but to a general audience of generative linguists.

Leo Laporte's 2005 Technology Almanac

Software has become an essential enabler for science and the economy. Not only does it create new markets and the possibility of a more reliable, flexible and robust society, it also empowers our exploration of the world in ever increasing depth. However software often falls short of our expectations, with current methodologies, tools and techniques remaining insufficiently robust and reliable for constantly changing and evolving needs. This book presents papers from the 15th International Conference on New Trends in Intelligent Software Methodology Tools and Techniques (SoMeT 16), held in Larnaca, Cyprus, in September 2016. The SoMeT conference focuses on exploring the innovations, controversies and challenges facing the software engineering community, bringing together theory and experience to propose and evaluate solutions to software engineering problems with an emphasis on human-centric software methodologies, end-user development techniques, and emotional reasoning, for an optimally harmonized performance between the design tool and the user. The book is divided into six chapters covering the following areas: decision support systems; software methodologies and tools; requirement engineering; software for biomedicine and bioinformatics; software engineering models, and formal techniques for software representation; and intelligent software development and social networking. The book explores new trends and

theories which illuminate the direction of developments in the field, and will be of interest to all in the software science community.
