necessary to focus and clarify key ideas and concepts. Dr. Biehle's classic MCAT Physics Book presents a clear, insightful analysis of MCAT physics. His lively prose and subtle wit make this challenging topic more palatable. Dr. Biehle received his Ph.D. from Caltech (California Institute of Technology) in physics. He has ten years experience at various levels in science education. The MCAT Physics Book is a result of his experience presenting physics concepts in a classroom setting to students preparing for the MCAT.

This textbook covers the theoretical, fundamental aspects of naval architecture for students preparing for the Class 2 and Class 1 Marine Engineer Officer exams.

It introduces the basic foundation themes within naval architecture, (hydrostatics, stability, resistance and powering), using worked examples to show how solutions should be presented for an exam. The topics are ordered in a manner of a typical taught module, to aid the use of the book by lecturers as a compliment to a course. Importantly, this updated edition contains updated text and figures in line with modern practice, including an update of many of the figures to three-dimensional diagrams, and a new section on computer software for naval architecture. The book also includes sample examination questions with worked examples answers to aid students in their learning.

Electronics explained in one volume, using both theoretical and practical applications. Mike Tooley provides all the information required to get to grips with the fundamentals of

electronics, detailing the underpinning knowledge necessary to appreciate the operation of a wide range of electronic circuits, including amplifiers, logic circuits, power supplies and oscillators. The 5th edition includes an additional chapter showing how a wide range of useful electronic applications can be developed in conjunction with the increasingly popular Arduino microcontroller, as well as a new section on batteries for use in electronic equipment and some additional/updated student assignments. The book's content is matched to the latest pre-degree level courses (from Level 2 up to, and including, Foundation Degree and HND), making this an invaluable reference text for all study levels, and its broad coverage is combined with practical case studies based in real-world engineering contexts. In addition, each chapter includes a practical investigation designed

to reinforce learning and provide a basis for further practical work.

A companion website at <http://www.key2electronics.com> offers the reader a set of spreadsheet design tools that can be used to simplify circuit calculations, as well as circuit models and templates that will enable virtual simulation of circuits in the book.

These are accompanied by online self-test multiple choice questions for each chapter with automatic marking, to enable students to continually monitor their own progress and understanding. A bank of online questions for lecturers to set as assignments is also available.

This book addresses the effects of the environment on Saint Petersburg's cultural heritage. It summarizes the results of long-term, large-scale monitoring of monuments in, and the environment (air, soil, vegetation) of, the historical Saint Petersburg Necropolis. The book offers detailed descriptions of the unique collection of decorative stones in the Necropolis and discusses the deposits that were most likely used to create them. In addition, it characterizes the processes of stone and bronze monuments' degradation in response to physical, chemical and biogenic influences. Special attention is paid to describing the monitoring methodology and the structure of the monitoring information database. Drawing on the methodologies and cases presented here, the book subsequently puts forward a strategy for the conservation and restoration of these unique monuments. This book approaches practical questions of monuments

preservation that will be of interest to museum staff, restorers and experts in various fields (geologists, biologists, chemists, engineers, etc.) whose work involves problems of cultural heritage preservation. The book is interesting for everyone who is not indifferent to the history and preserving of the world culture.

Modern Engine Tuning
 Pulitzer Prize-winning author and astronomer Carl Sagan imagines the greatest adventure of all—the discovery of an advanced civilization in the depths of space. In December of 1999, a multinational team journeys out to the stars, to the most awesome encounter in human history. Who—or what—is out there? In *Cosmos*, Carl Sagan explained the universe. In *Contact*, he predicts its future—and our own.
