The M16 was first introduced in 1958 and was revolutionary for its time as it was made of lightweight materials including

special aluminum and plastics. It was first adopted by US Special Forces and airborne troops in 1962 before it was issued to Army and Marine units serving in Vietnam. Its use spread throughout the following decades and a number of variants including submachine and carbine versions were also fielded. As a result it is now amongst the three most used combat cartridges in the world while over 10 million M16s and variants have been produced making it one of the most successful American handheld weapons in history .But despite its undeniable success the M16 is not without its detractors. Indeed, the “black rifle”, as it is known, is one of the most controversial rifles ever introduced with a long history of design defects, ruggedness issues, cleaning difficulties and reliability problems

leading to endless technical refinements. This volume provides a technical history of the M16 and the struggle to perfect it together with an assessment of its impact on the battlefield drawing on over a decade's combat experience with the rifle. *U. Drill sergeants are the primary trainers of rifle marksmanship in Initial Entry Training (IET). They are responsible for teaching basic and advanced rifle marksmanship (BRM and ARM) to all enlisted Soldiers using a crawl-walk-run training strategy. The current BRM training strategy encompasses instruction on the fundamentals of marksmanship, grouping and zeroing an M16-/M4-series rifle, and transitional firing that culminates with a qualification event. The ARM training strategy focuses on engaging targets from advanced firing positions in increasingly difficult scenarios and conditions. From 2006 to 2010 the Initial Entry Training (IET) rifle marksmanship program went through numerous changes designed to better prepare the IET Soldier for deployment to

Afghanistan or Iraq. These changes redefined parts of the Army's marksmanship doctrine and required drill sergeants to relearn techniques and procedures required to implement the new training strategies. It was determined there was a need to generate a rifle marksmanship diagnostic and training guide that consolidated the tacit knowledge regarding the techniques that experienced drill sergeants and other expert marksmanship trainers had found to be effective with IET Soldiers. These techniques would provide valuable training supplements to the marksmanship field manual.

Rifle Marksmanship M16-/M4-series

Weapons Paladin Press

The U.S. Army teamed up with cartoonist and graphic artist Will Eisner to produce teaching tools for U.S. soldiers in a medium that they could easily understand. The M16A1 Rifle: Operation and Preventive Maintenance, first printed in 1969, features a female narrator who instructs GIs on the proper care of their AR-15 (military name M16A1) rifles—firearms

notorious for jamming and malfunctioning. More than a simple manual and step-by-step guide, this unconventional yet important military document tried to appeal to soldiers with suggestive chapter titles such as “How to Strip Your Baby,” “What to Do in a Jam,” “Sweet 16,” and “All the Way with Négligé.” A copy of the thirty-two-page booklet was issued to nearly every soldier serving in Vietnam.
