The GNU Autotools make it easy for developers to create software that is portable across many Unix-like operating systems. Although the Autotools are used by

thousands of open source software packages, they have a notoriously steep learning curve. And good luck to the beginner who wants to find anything beyond a basic reference work online. Autotools is the first book to offer programmers a tutorial-based guide to the GNU build system. Author John Calcote begins with an overview of high-level concepts and a quick hands-on tour of the philosophy and design of the

Autotools. He then tackles more advanced details, like using the M4 macro processor with Autoconf, extending the framework provided by Automake, and building Java and C# sources. He concludes the book with detailed solutions to the most frequent problems encountered by first-time Autotools users. You'll learn how to: –Master the Autotools build system to maximize your software's

portability
–Generate Autoconf configuration scripts to simplify the compilation process
–Produce portable makefiles with Automake –Build cross-platform software libraries with Libtool
–Write your own Autoconf macros
Autotools focuses on two projects: Jupiter, a simple "Hello, world!" program, and FLAIM, an existing, complex open source effort containing four separate but interdependent subprojects.

Follow along as the author takes Jupiter's build system from a basic makefile to a full-fledged Autotools project, and then as he converts the FLAIM projects from complex hand-coded makefiles to the powerful and flexible GNU build system. M16-series rifle training during (M16A1/A2/A3 /A4) and M4 carbine. It is a guide for commanders, leaders, and instructors to develop training programs, plans, and lessons that meet the objectives or intent of the United States Army rifle marksmanship program and FM 7-0. This manual is organized to lead the trainer through the material needed to conduct

initial entry training (IET) and unit sustainment training. Preliminary subjects include discussion on the weapon's capabilities, mechanical training, and the fundamentals and principles of rifle marksmanship. Progress in Water Technology,
Volume 6: Instrumentation Control and Automation for Waste-Water Treatment Systems

contains the proceedings of the International Association on Water Pollution Research

Workshop on Instrumentation Control and Automation for Waste-Water Treatment Systems, held in London in September 1973.

Contributors review major advances that have been made in instrumentation control and automation of wastewater treatment.

This volume consists of 70 chapters

I organized into six sections.

The work of the Directorate General Water Engineering in the Department of the Environment and the Environmental Protection Agency in the United States with respect to promotion of instrumentation, control, and automation for wastewater

treatment systems is first discussed. This discussion is followed by a chapter that describes the effects of water pollution legislation in The Netherlands on the selection of wastewater treatment plants and their consequences for consulting engineers regarding process,

technical, and economical feasibility. A real-time water quality management system for a major river in Pennsylvania is also considered, along with effluent control and instrumentation in Europe. The chapters that follow focus on instrumentation and control problems in the design of a modern

sewage works; installation of field equipment in automated process control systems; process control for biological treatment of organic industrial wastewaters; and the use of computers to control sewage treatment. This book will be of interest to authorities, planners, and policymakers involved in

wastewater
treatment
and water
pollution
control.

marksmanship proficiency depends on proper training and application of the basic marksmanship fundamentals. During initial marksmanship training, emphasis is placed on learning the firing fundamentals, which are taught in four phases-preliminary marksmanship instruction (PMI), downrange firing, and advanced firing exercises. This prepares Soldiers for advanced optic and laser training for combat-type collective exercises and real-world deployments. This official Field Manual 3-22.9 contains

direct corollary information on civilian application of the semi-automatic AR-15 5.56mm weapon platform.

The book presents laboratory experiments concerning ARM microcontrollers, and discusses the architecture of the Tiva Cortex-M4 ARM microcontrollers from Texas Instruments, describing various ways of programming them. Given the meager peripherals and sensors available on the kit, the authors describe the design

of Padma – a circuit board with a large set of peripherals and sensors that connects to the Tiva Launchpad and exploits the Tiva microcontroller family’s on-chip features. ARM microcontrollers, which are classified as 32-bit devices, are currently the most popular of all microcontrollers. They cover a wide range of applications that extend from traditional 8-bit devices to 32-bit devices. Of the various ARM subfamilies, Cortex-M4 is a middle-level microcontroller that lends itself well to data acquisition and control as well as

digital signal manipulation applications. Given the prominence of ARM microcontrollers, it is important that they should be incorporated in academic curriculums. However, there is a lack of up-to-date teaching material – textbooks and comprehensive laboratory manuals. In this book each of the microcontroller’s resources – digital input and output, timers and counters, serial communication channels, analog-to-digital conversion, interrupt structure and power management

features – are addressed in a set of more than 70 experiments to help teach a full semester course on these microcontrollers. Beyond these physical interfacing exercises, it describes an inexpensive BoB (break out board) that allows students to learn how to design and build standalone projects, as well a number of illustrative projects. Operate Your Rifle Like a Pro – U.S. Army Official Manual This manual provides instructions and descriptions for use by the operator and

organizational maintenance personnel. They apply to the Service Kit, Portable Flamethrower - Riot Control Agent Dispenser, M27.

Armorer's Manual AR15/M16/M4 Family of Weapons

GNU m4 is an implementation of the traditional UNIX macro processor. It is mostly SVR4 compatible, although it has some extensions (for example, handling more than 9 positional parameters to macros). m4 also has builtin functions for including files, running shell commands, doing arithmetic, etc.

Autoconf needs GNU m4 for generating configure scripts, but not for running them.

Automotive A-Z

The M4 Sherman can be said to be the tank that won World War II. With almost fifty thousand built during the war, it was America's primary armored fighting vehicle during the war. Thousands of these found their way into the inventories of the British Army and Soviet Red Army as well as other allies. This manual covers the development of the Sherman, the vast array of variants, and the use of the

hull and chassis for other purposes. Also covered is production, anatomy, paintwork, and markings. Information on the M4 in action takes the reader from combat against Rommel's Afrika Korps to Italy, the invasion at Normandy, and the race across France. And it wouldn't be a Haynes manual without practical information about owning, restoring, and maintaining a Sherman tank. Whether you are an armchair General Patton or a serious collector, tips on buying a tank, special tools, handling heavy components, and

recommended fluids and lubricants will prove invaluable. Operator's and Organizational Maintenance Manual The most comprehensive guide to automotive terms available. Whether you're a student, apprentice, mechanic, automotive industry worker, a driver, or car/motorcycle enthusiasts, with over 13,000 entries and extensive appendices, this guide explains the function of thousands of car,

truck and motorcycle components. • Contains an English/American translator, with 350 automotive terms. • Defines the meanings of automotive acronyms like ABS, PS, CPU and VIN. Gnu M4 Reference Manual This illustrated e-book is meticulously edited and formatted to the highest digital standard. It provides detailed and clear guidance for the training on the 5.56-mm M16-rifle series (M16A1/A2/A3/A4) and M4 carbine. The edition offers
