[Children's Reading Comprehension and Assessment](#) Routledge

Originating in a recent CIERA conference held at the University of Michigan, this book brings together the nation's most distinguished researchers to examine how readers understand text and how comprehension is assessed. The first part provides both national and historical contexts for the study of reading comprehension. The second part examines how vocabulary, motivation, and expertise influence comprehension, and it includes analyses of the developmental course and correlates of comprehension. Chapters in the third part consider how schools focus on comprehension for instruction and assessment. The fourth part includes chapters on large-scale assessment that analyze how test formats and psychometric characteristics influence measures of reading comprehension. At the end of each part is a commentary--written by an expert--that reviews the chapters, critiques the main points, and synthesizes critical issues. Key features of this outstanding new book include: *Integration of Research and Practice--provides a bridge between conceptual issues studied by researchers concerned with reading comprehension theories and practical issues addressed by educators concerned with classroom instruction and assessment. *Comprehension Focus--provides a thorough history and rigorous research-based analyses of reading comprehension. *Assessment Focus--provides innovative approaches to comprehension assessment that include the influences of vocabulary, decoding, and motivation. *Synthetic Commentaries--provides periodic summaries that analyze and synthesize research, practices, and issues discussed in each part. *Expertise--contributing authors and commentators are highly respected authorities on reading comprehension (see table of contents). This text is appropriate for educational and psychological researchers, reading educators, and graduate students in education and psychology. It is part of the CIERA series, which includes the following volumes: Taylor and Pearson: Teaching Reading: Effective Schools, Accomplished Teachers (2002) Van Kleeck, Stahl, and Bauer: On Reading Books to Children: Parents and Teachers (2003) Hoffman and Schallert: The Texts in Elementary Classrooms (2005)

Classroom Motivation Routledge

"Simply put, this book is designed to maximize motivation so that students develop the reading habit. With this goal in mind, the authors present motivating classroom activities that promote intrinsic literacy motivation. Many of the activities described in the chapters in the book provide opportunities for the integration of the language arts and include many suggestions for engaging students in listening, speaking, reading and writing"--

[All about Reading, Level 1](#) Teacher Created Materials

This book aims to contribute to a growing interest amongst psycholinguists and morphologists in the mechanisms of meaning predictability. It presents a brand-new model of the meaning-prediction of novel, context-free naming units, relating the wordformation and wordinterpretation processes. Unlike previous studies, mostly focussed on N+N compounds, the scope of this book is much wider. It not only covers all types of complex words, but also discusses a whole range of predictability-boosting and -reducing conditions. Two measures are introduced, the Predictability Rate and the Objectified Predictability Rate, in order to compare the strength of predictable readings both within a word and relative to the most predictable readings of other coinages. Four extensive experiments indicate inter alia the equal predicting capacity of native and non-native speakers, the close interconnection between linguistic and extra-linguistic factors, the important role of prototypical semes, and the usual dominance of a single central reading.

[PISA 2015 Results \(Volume IV\) Students' Financial Literacy](#) John Wiley & Sons

This volume links theoretical and instructional approaches on how reading is motivated and assessed, and examines the interrelationship between reading motivation and achievement among boys and girls in culturally and geographically different settings. Much of the research on children's reading has focused on cognitive processes; however, reading is an activity that also requires interest and motivation. These attitudes are generally defined as readers' affect toward reading and their consequence is that children with more positive attitudes are more motivated to read. Taking into account the variability that exists within the notion of gender and age, this volume aims to examine and scrutinize previous research on the topic, as well as test theories on how the different dimensions of reading motivation vary with gender, in relation to cultural issues, motivational constructs, such as engagement and classroom climate, the role of emotions, interests and attitudes towards reading, among others. The book will be of interest to researchers, educators, graduate students, and other professionals working in the area of literacy,

reading motivation, reading achievement and gender differences.

Along with development, parents and children are involved in reciprocal exchanges within which both co-adapt their emerging relationships. With this transactional assumption, the eco-cultural approach stimulates researchers to study parenting from a complex perspective and to consider multiple influences shaping children's and families' lives. This book offers a wide, concrete eco-cultural perspective on parenting, addressing current issues such as wellbeing and emotional security, sibling relationships, vulnerable children, family-school partnerships, digital parenting, adolescence and risks, resilience in adversity, and immigration and cultural diversity. Written by researchers from all over the world, the twelve chapters in this volume testify to the strength of the plurality method for approaching parenting.

[Blueprint for a Literate Nation How You Can Help](#) Elsevier

This book highlights some of the main lines of research in cognitive psychology in the Alps-Adria region, which, being geographically located in the centre of the European continent, encompasses eleven regions from six different countries: namely, Austria, Croatia, Hungary, Italy, Serbia and Slovenia. The reason for bringing together authors from different geographical areas and with different approaches to the broad discipline defined as Cognitive Science is detailed in the first section of this book, which outlines a brief history of psychology in each country in the region and provides an overview of the spirit that characterizes the Alps-Adria working community. The Alps-Adria Rector Conference "believes that harmonious coexistence and efficient collaboration of the peoples and communities of the different regions constitute the characteristics and specificities of the present cultural landscape of the Alps-Adria region in Europe." It is in this spirit that this book has been edited, underscoring the concept of unity in diversity that has characterized the Alps-Adriatic community. Furthermore, such unity is now a necessary attribute for science, where interdisciplinarity is both highly encouraged and increasingly accepted. The second and third sections of the book are devoted to situating this interdisciplinarity in the framework of cognitive science. As such, this book will serve as a basis for fruitful exchange not only inside the community, but also beyond both geographical and theoretical borders.

Written specifically for teachers in training, Motivating Students to Learn offers a wealth of research-based principles on student motivation for use in the classroom. Positioning the teacher as the decisive motivator, the book is grounded in the realities of contemporary schools, curriculum goals, and peer dynamics. Twelve rich chapters offer extrinsic and intrinsic approaches to guide daily practice, guidelines for adapting to group and individual differences, and ways to reach discouraged or disaffected students. This revised fifth edition features new instructional strategies, summaries of effective interventions, chapters

on family/cultural diversity and teacher motivation, and more.

Elementary Students' Motivation to Read Guilford Press

Interpersonal Regulation of Learning and Motivation is the first book in the field to focus on major methodological advances in research on interpersonal regulation of learning and motivation. Interest in developing ways of capturing the dynamics of interpersonal regulation in real-life learning interactions is growing rapidly. Understanding these dynamics is particularly timely given the increased use of collaborative learning activities in schools and university settings, as well as through face-to-face and computer supported collaborative learning (CSCL) environments. While groups and collections of individuals in social interaction are expected to bring their own motivations and goals to the learning situations, it is also assumed that these are further shaped through interaction, as the group activity evolves. Research methodology publications in the field of learning, regulation and motivation are still dominated by a focus on the individual. The study of collaborative learning at both conceptual and methodological level has not incorporated the significance of social regulatory processes of learning and motivation. This is a new development in the field and one covered by this book. The book contains numerous illustrations of innovative: Methodological approaches to study and interpret the dynamics of interpersonal regulation Data sources and data representations to capture scaffolded instruction Theory-based analytic methods to investigate interactions in real-life collaborative learning Coding systems and social software tools for gathering and analysing interactive data. Interpersonal Regulation of Learning and Motivation brings together the work of scholars who have been studying interpersonal regulation of learning and motivation at the boundaries of the individual and the social, and who have made original methodological contributions to the study of interactive learning environments. In combination, their work provides a range of distinctive and original conceptual and methodological contributions to this under-examined and vital field of research, making this an essential read for any researcher or student interested in collaborative learning and motivation.

Increasing Reading Motivation and Achievement in the Intermediate Classroom Through Independent Reading Time, Interactive Book Talks, and Cooperative Book Activities Shell Education

Concept Oriented Reading Instruction (CORI) is a unique, classroom-tested model of reading instruction that breaks new ground by explicitly showing how content knowledge, reading strategies, and motivational support all merge in successful reading instruction. A theoretical perspective (engagement in reading) frames the book and provides a backdrop for its linkage between hands-on science activities and reading comprehension. Currently funded by the Interagency Educational Research Initiative (IERI), this model has been extensively class tested and is receiving national attention that includes being featured on a PBS special on the teaching of reading. Key features of this outstanding new volume include:

- *Theoretical Focus--CORI's teaching framework revolves around the engagement perspective of reading: how engaged reading develops and the classroom contexts and motivational supports that promote it.
- *Content-Area Focus--Although science is the content area around which CORI has been developed, its basic framework is applicable to other content areas.
- *Focus on Strategy Instruction--CORI revolves around a specific set of reading strategies that the National Reading Panel (2000) found to be effective. In some current CORI classrooms collaborating teachers implement all aspects of CORI and in other classrooms teachers implement just the strategy instruction component.
- *Illustrative Vignettes and Cases--Throughout the book vignettes and mini-case studies convey a situated view of instructional practices for reading comprehension and engagement. A detailed case study of one teacher and of the reading progress of her students is featured in one chapter. This book is appropriate for graduate and advanced undergraduate students in education and psychology, for practicing teachers, and for researchers in reading comprehension and motivation.
