[After Poststructuralism](#) MIT Press

The end of the Cold War revitalised continental philosophy and, more particularly, interest in it from outside philosophy. "After Poststructuralism: Transitions and Transformations" analyses the main developments in continental philosophy between 1980-1995, a time of great upheaval and profound social change. The volume ranges across the birth of postmodernism, the differing traditions of France, Germany and Italy, third generation critical theory, radical democracy, postcolonial philosophy, the turn to ethics, feminist philosophies, the increasing engagement with religion, and the rise of performativity and post-analytic philosophy. Analyses of the major figures are integrated within the discussion. After Poststructuralism reveals how continental philosophy - fuelled by an intense ethical and political desire to reflect changing social and political conditions - responded to the changing world and to the key issues of the time, notably globalisation, technology and ethnicity.

This innovative study of working-class formation in Philadelphia takes issue with a number of widely held views about the origins and nature of the early American working class. Although other historians locate the birth of the American working class in the middle decades of the nineteenth century, Schultz argues that the origins of Philadelphia's working class lay in the dramatic social changes that transformed artisan life in eighteenth-century Philadelphia. In contrast to recent accounts of working-class formation that trace its ideological roots to the republicanism of the Revolutionary and Jacksonian eras, Schultz argues that Philadelphia's working class drew its ideological force from an indigenous small-producer tradition inherited from the artisans of early modern England. Moreover, Schultz takes issue with the prevailing view that religion and party politics diminished working-class consciousness. Rather, he details the ways in which rational religion and popular politics were active forces in the formation of Philadelphia's early working class. Engagingly written and drawing upon a wide range of sources, this book reconstructs the moral and political worlds of Philadelphia artisans as they created America's first working class from the crucible of economic, political, and social change in the eighteenth and early nineteenth centuries.

In the only modern study synthesizing nineteenth-century American labor history, Bruce Laurie examines the character of working-class factionalism, plebian expectations of government, and relations between the organized few and the unorganized many. Laurie also examines the republican tradition and the movements that drew on it, from the General Trades Unions in the age of Jackson to the Knights of Labor later in the century.

Bayesian nonparametrics works - theoretically, computationally. The theory provides highly flexible models whose complexity grows appropriately with the amount of data. Computational issues, though challenging, are no longer intractable. All that is needed is an entry point: this intelligent book is the perfect guide to what can seem a forbidding landscape. Tutorial chapters by Ghosal, Lijoi and Prünster, Teh and Jordan, and Dunson advance from theory, to basic models and hierarchical modeling, to applications and implementation, particularly in computer science and biostatistics. These are complemented by companion chapters by the editors and Griffin and Quintana, providing additional models, examining computational issues, identifying future growth areas, and giving links to related topics. This coherent text gives ready access both to underlying principles and to state-of-the-art practice. Specific examples are drawn from information retrieval, NLP, machine vision, computational biology, biostatistics, and bioinformatics.

In 1982, Sister Helen Prejean became the spiritual advisor to Patrick Sonnier, the convicted killer of two teenagers who was sentenced to die in the electric chair of Louisiana's Angola State Prison. In the months before Sonnier's death, the Roman Catholic nun came to know a man who was as terrified as he had once been terrifying. She also came to know the families of the victims and the men whose job it was to execute—men who often harbored doubts about the rightness of what they were doing. Out of that dreadful intimacy comes a profoundly moving spiritual journey through our system of capital punishment. Here Sister Helen confronts both the plight of the condemned and the rage of the bereaved, the fears of a society shattered by violence and the Christian imperative of love. On its original publication in 1993, *Dead Man Walking* emerged as an unprecedented look at the human consequences of the death penalty. Now, some two decades later, this story—which has inspired a film, a stage play, an opera and a musical album—is more gut-wrenching than ever, stirring deep and life-changing reflection in all who encounter it.

Today's CEO must be a global leader who also understands that parts of the business must be managed locally. Someone who sets a strategic vision, though industry and technology disruptions will surely threaten that vision. Someone who must live in the future to go to the future, while continuously creating economic and social value. Not an easy task. *Harder Than I Thought* is a fictional narrative that puts this increasingly complex job in context—by enabling you to walk alongside Jim Barton, the new CEO of Santa Monica Aerospace, as he steps into the role. Eighteenth-century Baltimore was a traditional society--aristocratic, personal, and private. New social groups appeared with new ideas, values, institutions, and social controls, and the community adapted in various ways. The industrial revolution standardized social processes and made them a matter of public concern, providing the basis for the new, nineteenth-century public society--one that was more democratic, less personal, and functionally modern. Between the late colonial period and the Civil War, the countryside of the American northeast was largely transformed. Rural New England changed from a society of independent farmers relatively isolated from international markets into a capitalist economy closely linked to the national market, an economy in which much farming and manufacturing output was produced by wage labor. Using the Connecticut Valley as an example, *The Roots of Rural Capitalism* demonstrates how this important change came about. Christopher Clark joins the active debate on the "transition to capitalism" with a fresh interpretation that integrates the insights of previous studies with the results of his detailed research. Largely rejecting the assumption of recent scholars that economic change can be explained principally in terms of markets, he constructs a broader social history of the rural economy and traces the complex interactions of social structure, household strategies, gender relations, and cultural values that propelled the countryside from one economic system to another. Above all, he shows that people of rural Massachusetts were not passive victims of changes forced upon them, but actively created a new economic world as they tried to secure their livelihoods under changing demographic and economic circumstances. The emergence of rural capitalism, Clark maintains, was not the result of a single "transition"; rather, it was an accretion of new institutions and practices that occurred over two generations, and in two broad chronological phases. It is his singular contribution to demonstrate the coexistence of a family-based household economy (persisting well into the nineteenth century) and the market-oriented system of production and exchange that is generally held to have emerged full-blown by the eighteenth century. He is adept at describing the clash of values sustaining both economies, and the ways in which the rural household-based economy, through a process he calls "involution," ultimately gave way to a new order. His analysis of the distinctive role of rural women in this transition constitutes a strong new element in the study of gender as a factor in the economic, social, and cultural shifts of the period. Sophisticated in argument and engaging in presentation, this book will be recognized as a major contribution to the history of capitalism and society in nineteenth-century America.

"While much has been written about the industrial revolution," writes Lawrence Peskin, "we rarely read about industrial revolutionaries." This absence, he explains, reflects the preoccupation of both classical and Marxist economics with impersonal forces rather than with individuals. In *Manufacturing Revolution* Peskin deviates from both dominant paradigms by closely examining the words and deeds of individual Americans who made things in their own shops, who met in small groups to promote industrialization, and who, on the local level, strove for economic independence. In speeches, petitions, books, newspaper articles, club meetings, and coffee-house conversations, they fervently discussed the need for large-scale American manufacturing a half-century before the Boston Associates built their first factory. Peskin shows how these economic pioneers launched a discourse that continued for decades, linking industrialization to the cause of independence and guiding the new nation along the path of economic ambition. Based upon extensive research in both manuscript and printed sources from the period between 1760 and 1830, this book will be of interest to historians of the early republic and economic historians as well as to students of technology, business, and industry.

Real Essentialism presents a comprehensive defence of neo-Aristotelian essentialism. Do objects have essences? Must they be the kinds of things they are in spite of the changes they undergo? Can we know what things are really like – can we define and classify reality? Many if not most philosophers doubt this, influenced by centuries of empiricism, and by the anti-essentialism of Wittgenstein, Quine, Popper, and other thinkers. Real Essentialism reinvigorates the tradition of realist, essentialist metaphysics, defending the reality and knowability of essence, the possibility of objective, immutable definition, and its relevance to contemporary scientific and metaphysical issues such as whether essence transcends physics and chemistry, the essence of life, the nature of biological species, and the nature of the person.
