general book on the Mac has been completely revised and updated. The
second edition is 759 pages with 500+ pages of new information plus rave

CD-ROM Buyer's Guide & Handbook

Published in 1992, like the first, this second edition is not intended as
introductory textbook command-driven, Boolean searching. It is
targeted at online searchers who already have some knowledge of
command languages and may be proficient searchers on databases in
one or two subject areas, but when required to venture into new and
less familiar territory still need guidance. It is also offered to end
users who possess the subject expertise but lack of information
retrieval know-how. The Manual is offered as a guide to database
selection and a navigational aid through the twists and turns of the
retrieval maze; at least some of the dead ends and backtracking may
thereby be avoided. This volume, written by experts in their various
fields, deals with the subject coverage and record structures of
specific databases, offers comparisons between databases (context,
indexing procedures, updating policies, etc.), discusses the choice
between online and CD-ROM sources (and between hosts if online is
selected), and illustrates strategies with numerous search extracts.
