Operator's, Unit, Intermediate Direct Support and Intermediate General Support Maintenance Manual (including Repair Parts and Special Tools List) DIANE Publishing

Increased costs and complexity of equipment have forced consideration of using simulators for maintenance training. The MAC-2 trainer simulates the data flow of the MA-7A bombing-navigational system. It can be used to train the flight-line mechanic in the use of data flow knowledge and technical manuals through practice in troubleshooting. It is also useful for performance evaluation. A brief history of this trainer is presented and its physical and functional characteristics are described. The specific objectives for the trainer and its advantages and limitations for attaining these objectives are discussed.
