MacBook in Easy Steps John Wiley & Sons
This is the extended and annotated edition including * an extensive annotation of almost 10,000 words about the oracles in religion * an interactive table-of-contents * perfect formatting for electronic reading devices THE Sibyls occupy a conspicuous place in the traditions and history of ancient Greece and Rome. Their fame was spread abroad long before the beginning of the Christian era. Heraclitus of Ephesus, five centuries before Christ, compared himself to the Sibyl "who, speaking with inspired mouth, without a smile, without ornament, and without perfume, penetrates through centuries by the power of the gods." The ancient traditions vary in reporting the

number and the names of these weird prophetesses, and much of what has been handed down to us is legendary. But whatever opinion one may hold respecting the various legends, there can be little doubt that a collection of Sibylline Oracles was at one time preserved at Rome. There are, moreover, various oracles, purporting to have been written by ancient Sibyls, found in the writings of Pausanias, Plutarch, Livy, and in other Greek and Latin authors. Whether any of these citations formed a portion of the Sibylline books once kept in Rome we cannot now determine; but the Roman capitol was destroyed by fire in the time of Sulla (B. C. 84), and again in the time of Vespasian (A. D. 69), and whatever books were at those dates kept therein doubtless perished in the flames. It is said by some of the ancients that a subsequent collection of oracles was made, but, if so, there is now no certainty that any fragments of them remain.

The essays in Web Writing respond to contemporary debates over the proper role of the Internet in higher education, steering a middle course between polarized attitudes that often dominate the conversation. The authors argue for the wise integration of web tools into what the liberal arts does best: writing across the curriculum. All academic disciplines value clear and compelling prose, whether that prose comes in the shape of a persuasive essay, scientific report, or creative expression. The act of writing visually demonstrates how we think in original and critical ways and in ways that are deeper than those that can be

taught or assessed by a computer.

Furthermore, learning to write well requires engaged readers who encourage and challenge us to revise our muddled first drafts and craft more distinctive and informed points of view. Indeed, a new generation of web-based tools for authoring, annotating, editing, and publishing can dramatically enrich the writing process, but doing so requires liberal arts educators to rethink why and how we teach this skill, and to question those who blindly call for embracing or rejecting technology.
