From the creator of the popular website Ask a Manager and New York's work-advice columnist comes a witty, practical guide to 200 difficult professional conversations—featuring all-new advice! There's a reason Alison Green has been called "the Dear Abby of the work world." Ten years as a workplace-advice columnist have taught her that people avoid awkward conversations in the office because they simply don't know what to say. Thankfully, Green does—and in this incredibly helpful book, she tackles the tough discussions you may need to have during your career. You'll learn what to say when • coworkers push their work on you—then take credit for it • you accidentally trash-talk someone in an email then hit "reply all" • you're being micromanaged—or not being managed at all • you catch a colleague in a lie • your boss seems unhappy with your work • your cubemate's loud speakerphone is making you homicidal • you got drunk at the holiday party

Praise for Ask a Manager "A must-read for anyone who works . . . [Alison Green's] advice boils down to the idea that you should be professional (even when others are not) and that communicating in a straightforward manner with candor and kindness will get you far, no matter where you work." —Booklist (starred review) "The author's friendly, warm, no-nonsense writing is a pleasure to read, and her advice can be widely applied to relationships in all areas of readers' lives. Ideal for anyone new to the job market or new to management, or anyone hoping to improve their work experience." —Library Journal (starred review) "I am a huge fan of Alison Green's Ask a Manager column. This book is even better. It teaches us how to deal with many of the most vexing big and little problems in our workplaces—and to do so

with grace, confidence, and a sense of humor." —Robert Sutton, Stanford professor and author of *The No Asshole Rule* and *The Asshole Survival Guide* "Ask a Manager is the ultimate playbook for navigating the traditional workforce in a diplomatic but firm way." —Erin Lowry, author of *Broke Millennial: Stop Scraping By and Get Your Financial Life Together*

Kosher? That means the rabbi blessed it, right? Not exactly. In this captivating account of a Bible-based practice that has grown into a multibillions-dollar industry, journalist Sue Fishkoff travels throughout America and to Shanghai, China, to find out who eats kosher food, who produces it, who is responsible for its certification, and how this fascinating world continues to evolve. She explains why 86 percent of the 11.2 million Americans who regularly buy kosher food are not observant Jews—they are Muslims, Seventh-day Adventists, vegetarians, people with food allergies, and consumers who pay top dollar for food they believe "answers to a higher authority." Fishkoff interviews food manufacturers, rabbinic supervisors, and ritual slaughterers; meets with eco-kosher adherents who go beyond traditional requirements to produce organic chicken and pasture-raised beef; sips boutique kosher wine in Napa Valley; talks to shoppers at an upscale kosher supermarket in Brooklyn; and marches with unemployed workers at the nation's largest kosher meatpacking plant. She talks to Reform Jews who are rediscovering the spiritual benefits of kashrut, and to Conservative and Orthodox Jews who are demanding that kosher food production adhere to ethical and environmental values. And she chronicles the corruption, price-fixing, and strong arm tactics of early-twentieth-century kosher meat production, against which contemporary kashrut standards pale by comparison. A revelatory look at the current state of kosher in America, this book will appeal to anyone interested in food, religion, Jewish identity, or big business.

The fascinating story behind the machines that trade trillions of dollars every day “ A Bildungsroman, one jacket blurb calls this book—and sure, it ’ s a traditional coming-of-age tale. But the story itself is anything but conventional. The pleasures of the book lie in the story of their bumpy path to success. ” Canadian Business In 1968, Michael Goodkin is about to graduate from Columbia University. While his classmates interview for jobs, he daydreams of seeing the world as a man of independent means. Noticing that there are no computers on Wall Street and drawing on his experiences as a failed teenage investor and successful gambler, he has an epiphany: since no one knows the right price for anything, the only way to beat the market is to make a computer that comes up with the wrong answer faster than the professionals. And thus begins a journey that takes this provincial Midwesterner from nearly broke to opulent Park Avenue. The Wrong Answer Faster is the story of unintended consequences: how a technique originally created to minimize market risk spiraled into a multi-trillion dollar game with unparalleled risks. Having founded and sold a firm that changed the world, Goodkin left New York to travel and play backgammon—only to return to found another groundbreaking firm, Numerix, a software company that substituted computational physics for econometrics to better manage derivative risk. The story of the computerization of Wall Street by the man at the helm Packed with keen insights, based almost entirely on poker, backgammon and game theory Goodkin's unique insight to the markets is that everyone has the wrong answers The solution is not to try to beat the market but to come up with the wrong answers faster The epic tale of the untold story how one man with a great idea decided not to play the market but to revolutionize the financial world for generations to come by creating the most ground breaking tool for market players since the ticker tape.

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding.

Programming tutorials are offered on the book's web site.
