In the vanguard of the revolution has been John Grant, co-founder of the legendary agency St. Luke's and author of *The New Marketing Manifesto*, whose radical thinking has informed a generation. Now Grant is set to stun the industry again. In *The Brand Innovation Manifesto*, he redefines the nature of brands, showing why old models and scales no longer work and revealing that the key to success today is impacting people's lifestyles (think Starbucks, iPod and eBay). At the heart of the book is the concept of the 'brand molecule' to

which new cultural ideas can be constantly added to keep pace with change. Cataloguing 32 classes of idea, Grant presents a practical approach to mixing and matching them within your own market to develop new brand ideas - and new ideas for existing brands.

The polymerase chain reaction (PCR) is a technique used to replicate specific pieces of DNA millions of times, which permits the detection and analysis of minute amounts of nucleic acids. Since its introduction in the late 1980s, this technique has been applied not only in molecular biology research but also in fields as diverse as anthropology, phylogeny, and forensics. However, despite the large impact of PCR, many of its applications remain within the confines of research and the academic environment. Now, in *A Low-Cost Approach to PCR: Appropriate Transfer of Biomolecular Techniques*, Dr. Eva Harris makes this elegantly simple technique more accessible to researchers, physicians, and laboratory workers throughout the world. She provides a description of the theoretical basis of the technique, the practical details of the method, and the philosophy behind the technology transfer program that she developed over the last ten years. The book serves as a guide for potential users in developing countries and for scientists in developed countries who may wish to work abroad. In addition, the

low-cost approach outlined in this book can be useful for high school, undergraduate, or continuing education programs in the United States. While the specific applications of PCR outlined in the book are immediately useful to the study of infectious diseases, the approach presented can be generalized to a number of other technologies and situations. The book will help laboratories in many areas of the world generate information on site for use by physicians, epidemiologists, public health workers, and health policy professionals to develop new strategies for disease control.

When Peterhouse School opened in 1955, the British Empire in Africa was still intact and the Federation of Rhodesia and Nyasaland had just come into being. It was a boarding school founded on the British model, but with the intention that it would 'adapt all that is best in the Public School tradition to African conditions'. The story of Peterhouse is not only about work and sport, music and drama, chapel and syllabus changes. It is set in the context of educational development and political changes in a Southern Africa country. The school became a pioneering multi-racial institution in 'white Rhodesia'; shared the sufferings of the country during the 'bush war'; expanded greatly in the new Zimbabwe, survived the contradictions of a black 'Marxist' government, and has kept its firm commitment to being a 'Church School'. Despite the uncertainties and challenges of the new century, this is a story of faith and vision.

I wasn't going to lose the woman I loved. I would hold onto her until the last breath left my body. It was my mistakes that were hurting us and I would be the one to fix it.
