Offering an introduction to the  
world's seas as a platform for  
global exchange and  
connection, Michael North  
offers an impressive world  
history of the seas over more  
than 3,000 years. Exploring  
the challenges and dangers of  
the oceans that humans have  
struggled with for centuries,  
he also shows the possibilities  
and opportunities they have  
provided from antiquity to the  
modern day. Written to  
demonstrate the global  
connectivity of the seas, but  
also to highlight regional  
maritime power during  
different eras, From Harbour  
to Horizon takes sailors,  
merchants and migrants as the  
protagonists of these histories  
and explores how their  
experiences and perceptions of  
the seas were consolidated

---

through trade and cultural exchange. Bringing together the various maritime historiographies of the world and underlining their unity, this book shows how the ocean has been a vital and natural space of globalization. Carrying goods, creating alliances, linking continents and conveying culture, the history of the ocean played a central role in creating our modern globalized world.

Star charts, step-by-step projects, photos, and more: “The Total Skywatcher’s Manual is a fun book, but more importantly, it’s a useful book.” —Sky & Telescope With fully illustrated star charts, gorgeous astrophotography, and step-by-step project instruction, this is the only guide you need to navigate the night (and day) sky. Learn about the phases of the moon, how to conduct your own deep-sky observations, how the universe is expanding, our search

for life on other planets, meteors vs. meteorites, sunspots and solar flares, best eclipse-viewing techniques—everything you need to know to appreciate the wonder of our universe. The Total Skywatcher’s Manual will help stargazers, comet-spotters, and planet-seekers: Choose the best telescope Identify constellations and objects in the night sky Search for extraterrestrial phenomena Plan star parties Capture beautiful space imagery and much more For well over a century, the Astronomical Society of the Pacific has provided resources, tools, and information to astronomy enthusiasts, including amateur astronomers, families, and science educators. Now they draw on their wide-ranging expertise to guide you through the skies. Official Manual, State of Missouri Prentice Hall This book is one of two volumes meant to capture, to the extent practical, the scientific legacy of the Cassini – Huygens prime mission, a landmark in the history of planetary

---

exploration. As the most ambitious and interdisciplinary planetary exploration mission to date, it has extended our knowledge of the Saturn system to levels of detail at least an order of magnitude beyond that gained from all previous missions to Saturn. Nestled in the brilliant light of the new and deep understanding of the Saturn planetary system is the shiny nugget that is the spectacularly successful collaboration of individuals, organizations and governments in the achievement of Cassini – Huygens. In some ways the partnerships formed and lessons learned may be the most enduring legacy of Cassini – Huygens. The broad, international coalition that is Cassini – Huygens is now conducting the Cassini Equinox Mission and planning the Cassini Solstice Mission, and in a major expansion of those fruitful efforts, has extended the collaboration to the study of

new flagship missions to both Jupiter and Saturn. Such ventures have and will continue to enrich us all, and evoke a very optimistic vision of the future of international collaboration in planetary exploration.

Manual of modern geography, mathematical, physical, and political Springer Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish.

Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature and product innovation, has become the gold standard against which all other outdoor-industry awards are measured. Mergent OTC Unlisted Manual Bloomsbury Publishing

Map projection concerns the science of mathematical cartography, the techniques by which the Earth's dimensions, shape and features are translated in map form, be that two-dimensional paper or two- or three-dimensional electronic representations. The central focus of this book is on the theory of map projections. Mathematical cartography also takes in map scales and their variation, the division of maps into sets of sheets

and nomenclature, and addresses the problems of making measurements and conducting investigations which make use of geodetic measurements and the development of graphical methods for solving problems of spherical trigonometry, marine- and aeronavigation, astronomy and even crystallography.
