For about \$150 anyone can access the United States' multi-billion dollar

GPS program. Using GPS Outdoors: A Practical Guide for Hikers, Bikers, Paddlers, and Climbers shows readers how to plug in and enhance most any outdoor experience. Whether a hiker on a weekend trip through the Great Smokies, a backpacker cruising the Continental Divide Trail, a mountain biker kicking up dust in Moab, a paddler running the Lewis and Clark bicentennial route, or a climber pre-scouting the routes up Mount Shasta, a simple handheld GPS unit is fun, useful, and can even be a lifesaver.

Described in conjunction with today's most popular GPS software, easy to understand information enables readers to:

- Plan a trip
- Navigate along a route
- Gather data from the outing
- Analyze trip data after the trip

Information is power, and a GPS unit is today's preferred tool to harness the power of navigational technology for a more enjoyable, more informative, and possibly safer outdoor experience.

iewGeographical Targeting for Poverty Alleviation Methodology and Applications
The most trustworthy source of information available today on savings and investments, taxes, money management, home

ownership and many other personal finance topics. Business Week Information Today, Inc. .."in many developing countries, there are large differences in economic conditions and the standard of living between regions, and even between communities within the same region. In many countries, poverty has a clear geographic dimension, since the poor are often concentrated in pockets of poverty. Therefore, the design of poverty alleviation policies must also have a significant spatial component." Although development projects are carefully designed and meticulously evaluated for cost

effectiveness and benefits, too many of them are not sufficiently targeted geographically. The growing availability and use of spatial data, organized in a computer system such as a geographical information system (GIS), makes it more feasible to analyze the impact of projects in specific locales and to achieve more effective targeting. 'Geographical Targeting for Poverty Alleviation' introduces the basic concepts of a GIS. It also demonstrates how to organize geographic and nongeographic data. In addition, it presents different methods for using the data of the Household Income and Expenditure Survey, together with other surveys and the

population census, to provide estimates for the standard of living and the incidence of poverty incidence in different geographical areas of a country. Ultimately, these estimates should be used to establish guidelines for targeting poverty alleviation projects. This publication illustrates different GIS applications for identifying the project's target population, determining the project's spatial 'sphere of influence' or deciding where to locate public facilities. This publication is of interest to task managers, economists, development researchers, and geographers. Backpacker Asprs Publications
