With fast growth in information technologies, as well as an increasing number of mobile and wireless devices and services, the need to address vulnerabilities has been highly prioritized by many large corporations, as well as small and medium companies. The value of financial data in an accounting information system is extremely high. Thus, cybersecurity has become a critical concern in managing accounting information systems. Accounting information systems (AIS) aim to support all accounting functions and activities, including financial reporting, auditing, taxation, and management accounting. The AIS is a core knowledge area for accounting professionals and is a critical requirement for accounting practice. This book provides the essential knowledge for the accounting professional to stay ahead of the technology curve. This includes the accounting information system's characteristics, accounting cycles, and accounting processes; reviews different types of information system designs and architectures; and discusses cybersecurity, vulnerabilities, cyber crime, cyber-attacks, and defense strategies.

Information & communication technology (ICT) and the automotive sector are two of the most important industries in the EU and the US. The EU's eastern expansion and economic globalization have reinforced competition on the one hand; on the other hand the importance of outsourcing and off-shoring has increased. Against this background the intensification of innovation dynamics becomes crucial – and with them the role of regional innovation clusters. The analysis examines seven regions and six EU countries. The focus is on cluster and network dynamics in both industries, as regional ICT clusters are playing an increasingly central role in many European regions. Specialization and structural change in the automotive sector are highlighted, and new strategic approaches for multinational companies and changes in policy options are identified.

From the author of *The Real History Behind the Templars--the origins and stories behind end-of-the-world predictions throughout history, from Revelations to 2012*. In

entertaining and sharp prose, historian Sharan Newman explores theories of world destruction from ancient times up to the present day- theories which reveal as much about human nature as they do about the predominant historical, scientific, and religious beliefs of the time. Readers will find answers to the following end-of-times questions: ?Did the Mayans really say the world will end in December 2012? ?How have the signs in the New Testament Book of Revelations been interpreted over the years? ?How did ancient Egyptians, Norse, and Chinese think the world would end? ?When did Nostradamus predict that the last days would come? ?Does the I Ching reference 2012? ?Why didn't the world end in Y2K? ?Are meteors, global warming, super-volcanoes, and the threat of nuclear war signs that the end is near?

She's on the sheriff's most wanted list. Waking up with a naked woman holding a knife at his throat is just about the last thing Sheriff Travis Flynn expected. And the brother she's looking for? A murderer. And dead. Probably. But the real shock comes when she insists she's not a Lycan. LeAnn Wilcox isn't looking for love...especially not from some wolf in sheriff's clothing. She operates on the other side of the law. Once she finds her brother-alive-she'll get out of the pack's territory and go back to her regular, normal, non-furry life of changing jobs and her name whenever her past closes in. The cool, logical Sheriff has finally met his match, but LeAnn's life is at stake if she won't claim her place in the pack, especially once his control over the pack is challenged and her brother's fate is questioned.

A historical and ethnographic study of the conflict between global transportation and rural development as the two intersect at the Panama Canal. In this innovative book, Ashley Carse traces the water that flows into and out from the Panama Canal to explain how global shipping is entangled with Panama's cultural and physical landscapes. By following

container ships as they travel downstream along maritime routes and tracing rivers upstream across the populated watershed that feeds the canal, he explores the politics of environmental management around a waterway that links faraway ports and markets to nearby farms, forests, cities, and rural communities. Carse draws on a wide range of ethnographic and archival material to show the social and ecological implications of transportation across Panama. The Canal moves ships over an aquatic staircase of locks that demand an enormous amount of fresh water from the surrounding region. Each passing ship drains 52 million gallons out to sea—a volume comparable to the daily water use of half a million Panamanians. Infrastructures like the Panama Canal, Carse argues, do not simply conquer nature; they rework ecologies in ways that serve specific political and economic priorities. Interweaving histories that range from the depopulation of the U.S. Canal Zone a century ago to road construction conflicts and water hyacinth invasions in canal waters, the book illuminates the human and nonhuman actors that have come together at the margins of the famous trade route. 2014 marks the 100th anniversary of the Panama Canal. Beyond the Big Ditch calls us to consider how infrastructures are materially embedded in place, producing environments with winners and losers.
