For nearly 30 years, the Manual of Clinical Psychopharmacology has been the preeminent volume on psychotropic medications and the go-to source for psychiatrists prescribing for their patients and students in psychiatry and pharmacology. This new, eighth edition has been thoroughly updated in

recognition of the relentless developments in the field, including the release of new U.S. Food and Drug Administration – -approved drugs, newly approved uses for existing drugs, and newly identified interactions, dosing guidelines, and documented side effects. As with previous iterations, this edition is logically structured and highly readable. However, the ever-expanding number of available agents and indications mandated the condensing of some sections and the elimination of others, to keep the book from becoming too large to be user-friendly. The resulting volume is DSM-5 compatible, easy-to-use, and practical, with summary tables for quick reference. The pace and complexity of research in this critical discipline make it essential that clinicians stay abreast of both new medications and promising treatment protocols. The Manual of Clinical Psychopharmacology delivers authoritative information in a friendly, collegial style, maintaining the level of excellence readers have come to expect. Built by Boeing Commercial Airplanes, the 707 narrow body jet airliner first flew in 1957 and entered revenue service with Pan American World Airways in 1958.

Versions of the aircraft have a capacity from 140 to 219 passengers and a range of 2,500 to 5,750 nautical miles.

Developed as Boeing's first jet airliner, the 707 is a swept-wing design with podded engines. Although it was not the first jetliner in service, the 707 was the first to be commercially successful. Dominating passenger air transport in the 1960s and remaining common through the 1970s, the 707 is generally credited with ushering in the age of jet travel. It established Boeing as one of the largest manufacturers of passenger aircraft and led to the later series of airliners with '7x7' designations. The later 720, 727, 737, and 757 share elements of the 707's fuselage design.
