Making your own fibreglass parts. I recently bought an ARF and was disappointed by the quality of the supplied cowling. It is made from very thin plastic, and had a crack in it just from shipping! It is the only aspect of the model that I really don't like, so I figure I'll have a go at making my own cowl. After digging around on forums ...

Fiberglass parts

Now, with your helper, lay one layer of fiberglass cloth on the surface, starting with the center of the cloth and out. Make sure there is a bit hanging over the sides, at least 2". Now, quickly mix your resin.

The resin will start to harden as soon as the catalyst is added so quickly mix it and with a brush soak the

fabric.

Follow all instructions provided with your materials in regard to proper catalyzation of the resin and storage and handling of your tools and materials. Cut strips of 1-1/2 oz fiberglass mat on a piece of cardboard, ready to be wetted out. 3 layers of 1-1/2 oz mat will make a part that is about 0.120" thick, as each layer contributes about .040" to the laminate.

[How to Make a Custom Fiberglass Dash](#)

And the answer is, you're right, getting rid of your old aluminum potable water tank is a good idea. As for the use of fiberglass to make a new tank, you probably want to check pricing on a pre-made polyethylene tank if you haven't already. It may be quite a bit less expensive than the cost of materials for a hand-made fiberglass tank.

These two methods are the right way to build an engine block from scratch. But neither suit my madness. Engine castings are great if you're making 10,000 blocks; I've watched them pour Ferrari engines on Discovery Channel that way. I'm missing a foundry and the ability to make those perfect sand castings.

[Do-it-yourself carbon fibre – TGR: Team Ghetto Racing](#)

Design the center console. Using the blocks of foam, rasping tools and sandpaper, build the basic shape of the center console. Use the rasping tools for the shape and the sandpaper for making the corners and edges smooth. Use the hot glue gun to glue foam blocks together if one block isn't enough.

The cowling shown in this example is for a pusher-powered aircraft, but the same method can be used for almost any cowling. A simple wooden frame was used to insure alignment of the (4") spinner backplate, based on the actual drawn plans. I had patterns I could use as external templates to check the shape,...

Can You Build a Fiberglass Hull From Scratch Page: 1 ...

Make a three-sided raised cover for the engine using 3/4-inch marine grade plywood. Refer to your measurements and cut the front and sides of the cover. Assemble the pieces with wood glue and 1 1/2-inch wood screws at the corners.

Make Your Own Fibreglass Engine

10. Now is a good time to make the needle-valve and glow plug driver holes in the side of the cowl.

Before the foam top is added, you can see how things line up. 11. Cut a piece of 2-inch thick blue insulation foam to size and place on top of the balsa sides. You ' ll have to carve and route the foam out to fit around the engine and engine mount.
