Making Connections: Issues in Canadian Geography Making Connections: Canada's Geography: A Regional Geography of the United States and Canada: Toward a Sustainable Future  
Bruce Gervais' new text offers a fresh approach to the study of physical geography, combining print and digital media to create a scientifically substantive work

that is written for students. Living Physical Geography focuses on human-physical geography interactions, using pedagogical features in the textbook and online to create a modern synthesis of the science of physical geography. Each of the four major parts in Living Physical Geography is identified by energy flows within Earth's physical systems. Additionally,

landscape analysis underpins the body of the text. Step-by-step examples are used to illustrate how landforms and systems develop, evolve, and change through time.

works on geographical studies of Canada as a whole, on multiple provinces, and on individual provinces. Works covered include books, monographs, atlases, book chapters, scholarly articles, dissertations, and theses. The contents are organized first by region into main chapters, and then each chapter is divided into sections:

General Studies, Cultural and Social Geography, Economic Geography, Historical Geography, Physical Geography, Political Geography, and Urban Geography. Each section is further sub-divided into specific topics within each main subject. All known publications on the geographical studies of Canada—in English, French, and

other language s—covering all types of geography are included in this bibliography. It is an essential resource for all researchers, students, teachers, and government officials needing information and references on the varied aspects of the environments and human geographies of Canada. **The ArcGIS Book** CSU Open Press

In fact, as new units of economic growth called mega-regions become increasingly specialized, the world is becoming more and more "spiky" – divided between flourishing clusters of talent, education and competitiveness, and moribund "valleys." All these places have personalities, Richard Florida explains in the second half of *Who's Your City?*, and happiness depends on finding the city in which you can balance your personal and career goals to thrive. More people than ever before now have the opportunity to choose where to live, but at different points in our lives we need different kinds of places, he points out – what a couple of recent college graduates want from their city isn't necessarily what a retiree is looking for. You have to find the place that suits you best: a boho-burb neighbourhood isn't likely to be the best fit for patio man. So, for the first time, *Who's Your City?* ranks cities by their fitness for various life stages, rating the best places for singles, young families, and empty nesters. It summarizes the key factors that make place matter to different kinds of people, from

professional opportunities to the closeness of family to how well it matches their lifestyle, and provides an in-depth series of steps to help you choose the right place wisely. Sparkling with Richard Florida's signature intellectual originality, *Who's Your City?* moves from insights to studies to personal anecdotes, from a startling "Singles Map" of the United States to surprising data on the difference

A perceptive and transformative book, it is both a brilliant exploration of the fundamental importance of place and an essential guide to making what may be the most important decision of your life. *A Dictionary of Arts, Sciences, Literature and General Information* Wiley-Blackwell Trillium Listed! regionally and globally. In doing, it updates the seminal contributions of Eva Taylor (1945), Kenneth Sealy (1957), Brian Graham (1995) and others to the study of air transport geography. Leading scholars in the field offer a unique insight into the key developments that have occurred in the field and the implications that these developments have had for geography, geographers, and global patterns of past, present and future air transport. Although globalization and liberalization processes have greatly expanded the demand for air transport over the last two decades, the industry has experienced several major setbacks due to economic, security, and environmental concerns. Many of these impacts have been much more pronounced in some regions, such as North America and Europe while others, such as Asia-Pacific have not been as adversely affected. Accordingly, there is a clear need to examine these recent economic and geopolitical changes from a geographical perspective given the differentiated pattern of effects from global processes. Addressing this need, this volume opens with thematic chapters covering key topics such as the historical geographies, socio-cultural mobilities, environmental externalities, urban geographies, and

sustainability of the global air transport industry, followed by regional analysis of the industry in Asia-Pacific, Latin America, Greater Middle East and Africa as well as North America and Europe.

"All geographers, whatever their interest, need to do research. This book will help them get started in the best possible way, with thoughtful advice on everything from project design, through choice of methods, to data analysis and presentation. The editors have assembled an impressive array of authors, all experts in their chosen field." - Tim Burt, University of Durham  
 "Excellent book. Valuable teaching aid."

Well written and covers a wide range of methods thoroughly." - Sue Rodway-Dyer, Exeter University

"This is an excellent book and deals with a number of topics (which I teach) outside of the tutorial module where it is a recommended text for geographers. A very useful textbook throughout a 3 year Geography programme." - Ian Harris, Bangor University

Key Methods in Geography is an introduction to the principal methodological issues involved in the collection, analysis and presentation of geographical information. It is unique in the reference literature for providing an overview of qualitative and quantitative methods for human and physical geography. An accessible primer, it will be used by students as a reference throughout their degree, on all issues from research design to presentation. This second edition has been fully revised and

updated and includes new chapters on internet mediated research, diaries as a research method, making observations and measurements in the field, and the analysis of natural systems. Organized into four sections: Getting Started in Geographical Research; Generating and Working with Data in Human Geography; Generating and Working with Data in Physical Geography; Representing and Interpreting

sense of fragmentation, danger, and placelessness. In *Geographies of Writing: Inhabiting Places and Encountering Difference*, Nedra Reynolds addresses these problems in the context of higher education, arguing that theories of writing and rhetoric must engage the metaphorical implications of place without ignoring materiality.
