A *Read With Jenna Today Show Book Club pick* and razor-sharp debut novel of three best friends navigating love, sex, faith, and the one night that changes it all. It's always been Malak, Kees, and Jenna against the world. Since childhood, under the watchful eyes of their parents, aunties and uncles, they've learned to live their own lives alongside the expectations of being good Muslim women. Staying over at a boyfriend's place is disguised as a best friend's sleepover, and tiredness can be blamed on studying instead of partying. They know they're existing in a perfect moment. With growing older and the stakes of love and life growing higher, the delicate balancing act between rebellion and religion is becoming increasingly difficult to navigate. Malak wants the dream: for her partner, community, and faith to coexist happily, and she

wants this so much she's willing to break her own heart to get it. Kees is in love with Harry, a white Catholic man who her parents can never know about. When he proposes, she must decide between her future happiness and the life she knows and family she loves. Jenna is the life of the party, always ready for new pleasures, even though she's plagued by a loneliness she can't shake. Through it all, they have always had each other. But as their college years come to a close, one night changes everything when harsh truths are revealed. As their lives begin to take different paths, Malak, Kees, and Jenna—now on the precipice of true adulthood—must find a way back to each other as they reconcile faith, family, and tradition with their own needs and desires. *These Impossible Things* is a paean to youth and female friendship—and to all the joy and messiness love holds. How the scientific study of magic reveals intriguing—and often unsettling—insights into the mysteries of the human mind.

What do we see when we watch a magician pull a rabbit out of a hat or read a person's mind? We are captivated by an illusion; we applaud the fact that we have been fooled. Why do we enjoy experiencing what seems clearly impossible, or at least beyond our powers of explanation? In *Experiencing the Impossible*,

Gustav Kuhn examines the psychological processes that underpin our experience of magic. Kuhn, a psychologist and a magician, reveals the intriguing—and often unsettling—insights into the human mind that the scientific study of magic provides. Magic, Kuhn explains, creates a cognitive conflict between what we believe to be true (for example, a rabbit could not be in that hat) and what we experience (a rabbit has just come out of that hat!). Drawing on the latest psychological, neurological, and philosophical research, he suggests that misdirection is at the heart of all magic tricks, and he offers a scientific theory of misdirection. He explores, among other topics, our propensity for magical thinking, the malleability of our perceptual experiences, forgetting and misremembering, free will and mind control, and how magic is applied outside entertainment—the use of illusion in human-computer interaction, politics, warfare, and elsewhere. We may be surprised to learn how little of the world we

actually perceive, how little we can trust what we see and remember, and how little we are in charge of our thoughts and actions. Exploring magic, Kuhn illuminates the complex—and almost magical—mechanisms underlying our daily activities.

Prize* One of the most fascinating scientific detective stories of the last fifty years, an exciting quest for a new form of matter. “A riveting tale of derring-do” (Nature), this book reads like James Gleick’s *Chaos* combined with an Indiana Jones adventure. When leading Princeton physicist Paul Steinhardt began working in the 1980s, scientists thought they knew all the conceivable forms of matter. *The Second Kind of Impossible* is the story of Steinhardt’s thirty-five-

year-long quest to challenge conventional wisdom. It begins with a curious geometric pattern that inspires two theoretical physicists to propose a radically new type of matter—one that raises the possibility of new materials with never before seen properties, but that violates laws set in stone for centuries. Steinhardt dubs this new form of matter “quasicrystal.” The rest of the scientific community calls it simply impossible. *The Second Kind of Impossible* captures Steinhardt’s scientific odyssey as it unfolds over decades, first to prove viability, and then to pursue his wildest conjecture—that nature made quasicrystals long before humans discovered them. Along the way, his team encounters clandestine collectors, corrupt scientists, secret diaries, international smugglers, and KGB agents. Their quest culminates in a

daring expedition to a distant corner of the Earth, in pursuit of tiny fragments of a meteorite forged at the birth of the solar system. Steinhardt's discoveries chart a new direction in science. They not only change our ideas about patterns and matter, but also reveal new truths about the processes that shaped our solar system. The underlying science is important, simple, and beautiful—and Steinhardt's firsthand account is "packed with discovery, disappointment, exhilaration, and persistence...This book is a front-row seat to history as it is made" (Nature).

An investigation into the possibility of impossible languages, searching for the indelible "fingerprint" of human language. Can there be such a thing as an impossible human language? A biologist could

describe an impossible animal as one that goes against the physical laws of nature (entropy, for example, or gravity). Are there any such laws that constrain languages? In this book, Andrea Moro—a distinguished linguist and neuroscientist—investigates the possibility of impossible languages, searching, as he does so, for the indelible “fingerprint” of human language. Moro shows how the very notion of impossible languages has helped shape research on the ultimate aim of linguistics: to define the class of possible human languages. He takes us beyond the boundaries of Babel, to the set of properties that, despite appearances, all languages share, and explores the sources of that order, drawing on scientific experiments he himself helped design. Moro compares syntax to the reverse side of a tapestry revealing a hidden and apparently intricate structure. He describes the brain as a sieve, considers the reality of (linguistic) trees, and listens for the sound of thought by recording electrical activity in the brain. Words and sentences, he tells us,

are like symphonies and constellations: they have no content of their own; they exist because we listen to them and look at them. We are part of the data.

Impossible Subjects OR Books

This book is a collection of studies applying game-theoretical concepts and ideas to analysing the semantics of natural language and some formal languages. The bulk of the book consists of several papers by Hintikka, Carlson and Saarinen and discusses several of the central problems of the semantics of natural language. The topics covered are the semantics of natural language quantifiers, conditionals, pronouns and anaphora more generally. Hintikka’s famous essay presenting examples of “branching quantifier structures” in English, as well as one formulating his “any-every thesis”, are included. The book also includes Hintikka’s closely argued philosophical discussion of the relationships between the new semantical games with the language games of Wittgenstein.

Other papers apply the game-theoretical approach to formal languages including tense logics and tense anaphora (Saarinen), deontic logic and Ross' paradox (Hintikka), and usual predicate logic (Rantala). The latter amounts to an explication of the "impossible possible" worlds as is shown in Hintikka's concluding paper.

Teleportation, time machines, force fields, and interstellar space ships—the stuff of science fiction or potentially attainable future technologies? Biblicism, an approach to the Bible common among some American evangelicals, emphasizes together the Bible's exclusive authority, infallibility, clarity, self-sufficiency, internal consistency, self-evident meaning, and universal applicability. Acclaimed sociologist Christian Smith argues that this approach is misguided and unable to live up to its own claims. If evangelical biblicism worked as its proponents say it should, there would not be the vast variety of interpretive differences that biblicists themselves reach when they actually read and interpret the Bible. Far from challenging the inspiration and authority of Scripture, Smith critiques a particular

rendering of it, encouraging evangelicals to seek a more responsible, coherent, and defensible approach to biblical authority. This important book has generated lively discussion and debate. The paperback edition adds a new chapter responding to the conversation that the cloth edition has sparked.

Loving Stones is a study of devotees' conceptions of and worshipful interactions with Mount Govardhan, a sacred mountain located in the Braj region of north-central India that has for centuries been considered an embodied form of Krishna. It is often

said that worship of Mount Govardhan "makes the impossible possible." In this book, David L. Haberman examines the perplexing paradox of an infinite god embodied in finite form, wherein each particular form is non-different from the unlimited. He takes on the task of interpreting the worship of a mountain and its stones for a culture in which this practice is quite alien. This challenge involves exploring the interpretive strategies that may explain what seems un-understandable, and calls for theoretical considerations of incongruity, inconceivability, and other realms of the impossible. This aspect of the book includes critical consideration of the place and history of the pejorative concept of idolatry (and its

twin, anthropomorphism) in the comparative study of religions. Loving Stones uses the worship of Mount Govardhan as a site to explore ways in which scholars engaged in the difficult work of representing other cultures struggle to make "the impossible possible."
