This book analyzes the impact of digitization on management accounting in five manufacturing companies. It is one of the first in-depth empirical studies on the intersection of management accounting and digitization. The study suggests that there are two archetypes of digitization of the management accounting function.

The first archetype emphasizes top-down-driven changes that aim to enhance efficiency, such as conducting tasks with a higher degree of automation in a leaner structure with fewer resources. The second archetype is strongly driven and initiated by employees in the management accounting function (bottom-up). The focus is on improving the use of data by applying innovative analytics methods, integrating additional sources of data, and benefiting from new technologies like artificial intelligence. The results of the study also indicate that digitization of the management accounting function is mostly in line with the overall company strategy.

Case Studies in Management Accounting Cima

This case describes the sales of Dynamic Medical Solutions (DMS), a medical products supplier (as a retailer of products manufactured by others), whose reimbursements for sales made to customers eligible for Medicare and Medicaid appear to be in violation of government reimbursement guidelines. The case is an illustration of one of the major emerging trends in management accounting: expansion of profitability analysis from cost allocations focused primarily on product costs to sales channels and/or customer types, including the allocation of non-product costs. This real-world case requires students to first understand the dilemma faced by the company, including information regarding certain products and sales channels and related product cost data, departmental processes, and related operating expenses from its latest year of operations. The student's task is to evaluate alternatives the company should consider with regard to cost allocations to specific

products and sales channels along with their resulting impact on product pricing and channel profitability. Students will then be in a position to make recommendations ensuring both qualitative and quantitative compliance with government regulations for Medicare and Medicaid reimbursements.

This book illustrates the importance effective cost management systems in providing a supportive environment in which reliable and relevant management information can be generated. Such a cost management system is only attainable if the importance of key business, operational and stakeholder requirements are recognised within the organisational context. In illustrating this importance, this book provides several case studies as examples thereof. The first two case studies focus on the engineering sector and illustrates the development of a cost management system in a water recycling context; and the design of a budgetary system in a mining engineering context. The remaining case studies focus on the services sector, including cost management systems for a digital technology services provider and a medical insurance

services provider; an alternative activity-based costing approach for a public sector services provider; and finally a re-designed value stream for an automotive services provider. Academic researchers and industry managers in the fields of management accounting and financial management, as well as engineering and operations management, will find value in the experiences described herein.
