Heuristics are short-cuts and deliberately ignore information, for instance through examining fewer cues or integrating less information. However, this collides with a view on management accountants and controllers as rational agents which seems to suggest that all available information should be considered. As their role as information supplier is often accompanied with the task to assist managers in their judgment and decision making, they have huge influence on these

processes. Therefore, it is of high relevance to know if, how, and which heuristics management accountants and controllers use.

Furthermore, we need to know which individual and situational factors influence their usage of heuristics. With a series of five empirical studies, applying a mixed-methods research design, the author sheds light to these research questions and addresses some central claims of the potential biases but also the stunning benefits of relying on heuristic reasoning. Central to his discussion are dual-process-approaches which are debated in cognitive psychology. Scholars of these approaches claim that we

should distinguish between two distinct processes (or systems) of the human mind.

Following this interpretation, heuristics are processes which are described as intuitive, automatic, fast, and unconscious. They are routinized cognitive processes which are based on experience in certain social environments and thus often exhibit ecological rationality. Overall, this book picks up an up-to-date topic in behavioural accounting research, which not only is of relevance for researchers but as well for practitioners.

This book is the first in the management accounting framework literature to provide readers with insights on how to manage revenue and profit models by developing relationships with customers. The Principal Editor, Professor Kenichi Suzuki, is the founding father of Fixed Revenue Accounting (FRA) and his inputs offer invaluable insights on how businesses can increase revenue and adopt preventative

measures to deal with the fluctuations in the economy. FRA is a new management accounting tool that evaluates and manages the impacts of fixed customers on a company's financial health. 'Fixed customers' refer to frequent or regular customers who are expected to repeat their purchases. Their repeated purchases produce stability of revenue which in turn creates a stable profit environment and certainty. The profitability and stability generated by fixed customers can be utilized for strategic management, planning, and decision making to encourage investment for future growth. This book provides a deep understanding of the usefulness of the new

management accounting tool, and covers both the introduction of the concept of FRA and accompanying case studies in the contexts of Japanese manufacturing and service companies adopting the FRA model by examining profitability, stability, and growth analysis.

This book analyzes the impact of digitization on management accounting in five manufacturing companies. It is one of the first in-depth empirical studies on the intersection of management accounting and digitization. The study suggests that there are two archetypes of digitization of the management accounting

function. The first archetype emphasizes top-down-driven changes that aim to enhance efficiency, such as conducting tasks with a higher degree of automation in a leaner structure with fewer resources. The second archetype is strongly driven and initiated by employees in the management accounting function (bottom-up). The focus is on improving the use of data by applying innovative analytics methods, integrating additional sources of data, and benefiting from new technologies like artificial intelligence. The results of the study also indicate that digitization of the management accounting function is mostly in line with the overall company strategy.
