Cengage Learning

The authors wrote this text in response to the absence in the market of a text that would

meet the needs of finance majors, but would still be accessible to all students. In many cases, as many as 80% of undergraduate corporate finance courses are filled with non-finance majors who are either intimidated by this course or who don't understand why they have to take the class (or both!). This text addresses the challenges all professors face: keeping students at varying degrees of ability and interest motivated and invested in the material.

The theme of this volume is "Dealing with Volatility and Enhancing Performance".

During a time when there is much concern about the perceived volatility of global equity markets, the insights offered here could be reassuring as well as useful.

informative articles and institutional developments that have characterized the field of airline finance in the previous two decades. In the early chapters, the reader is introduced to the elementary theoretical foundations that underpin the role of finance in the airline industry. Critical topics, such as the time value of money, the notion of risk and return, and the complex nature of costs (fixed, semi-fixed, variable, and marginal) are discussed and illustrated with concrete examples. This is followed by an in-depth presentation of the role of accounting in airlines. Ratio analysis is used to further analyze airline financial statements. Airline industry specific metrics, such as cost per available seat mile (CASM) and revenue per revenue passenger mile (RRPM), are covered. The role of capital and asset management is then explained in the following chapters. The final chapters of the text present some important practical applications of the theoretical ideas presented earlier; these applications include hedging, the buy versus lease decision for aircraft and the question of the valuation of assets (mainly aircraft). Moreover, specific methods for actually calculating internal valuation are presented and evaluated. Foundations of Airline Finance: Methodology and Practice will be of greatest value to students who are contemplating entering financial management in the air transportation industry; however, the text will also serve as an accessible and comprehensive reference for industry professionals.

The primary contribution of this book is to integrate the important disciplines which simultaneously impact the investment appraisal process. The book presents a study that develops a new approach to investment appraisal which uses a multiple objective linear programming (MOLP) model to integrate the selected disciplines which include capital markets, corporate governance and capital budgeting. The research covers two case studies, one in the e-commerce sector and another in the airline industry in which the above disciplines are integrated. Readers from the areas of corporate governance, regulation, and accounting would find the survey of different approaches and the new integrated optimization approach particularly useful.
