Foundations of Airline Finance: Methodology and

Practice is a textbook that comprehensively covers, at a basic level, all aspects of the subject, bringing together many of the numerous and informative articles and institutional developments that have characterized the field of airline finance in the previous two decades. In the early chapters, the reader is introduced to the elementary theoretical foundations that underpin the role of finance in the airline industry. Critical topics, such as the time value of money, the notion of risk and return, and

the complex nature of costs (fixed, semi-fixed, variable, and marginal) are discussed and illustrated with concrete examples. This is followed by an in-depth presentation of the role of accounting in airlines. Ratio analysis is used to further analyze airline financial statements. Airline industry specific metrics, such as cost per available seat mile (CASM) and revenue per revenue passenger mile (RRPM), are covered. The role of capital and asset management is then explained in the following

chapters. The final chapters of the text present some important practical applications of the theoretical ideas presented earlier; these applications include hedging, the buy versus lease decision for aircraft and the question of the valuation of assets (mainly aircraft). Moreover, specific methods for actually calculating internal valuation are presented and evaluated. Foundations of Airline Finance: Methodology and Practice will be of greatest value to students who are contemplating entering

financial management in the air transportation industry; however, the text will also serve as an accessible and comprehensive reference for industry professionals.

Principles Of Managerial Finance, 11/E HarperCollins Publishers

In recent years the airline industry has experienced severe volatility in earnings, with airlines recording periods of substantial profits that are closely followed by periods of financial distress. This trend has continued into the new millennium, with numerous examples of airlines across the globe entering bankruptcy protection or liquidating. The text provides an introduction to both

the basics of finance and the particular intricacies of airline finance where there can be significant fluctuations in both revenues and costs. This new edition also includes: capital budgeting management of current assets financial risk analysis fuel hedging aircraft leasing This textbook contains chapters that cover unique aspects of the aviation financial decision-making process. These include a rigorous and structured presentation of the buy versus lease decision that is prevalent in the industry, a valuation process for aviation assets, the recent trend toward privatization and the difficulty inherent in the valuation of a publicly-owned or semi-publicly

owned asset. The Foundations of Airline Finance, now in its second edition, is an introductory text that can be used either as a general financial text or in a specialized class that deals with aviation finance in particular.
