[Engineering Project Management for the Global High Technology Industry](#) CRC Press At most technology companies, you'll reach Senior Software Engineer, the career level for software engineers, in five to eight years. At that career level, you'll no longer be required to work towards the next promotion, and being

promoted beyond it is exceptional rather than expected. At that point your career path will branch, and you have to decide between remaining at your current level, continuing down the path of technical excellence to become a Staff Engineer, or switching into engineering management. Of course, the specific titles vary by company, and you can replace "Senior Engineer" and "Staff Engineer" with whatever titles your company prefers. Over the past few years we've seen a flurry of books unlocking the engineering management career path, like Camille Fournier's *The Manager's Path*, Julie Zhuo's *The Making of a Manager*, Lara Hogan's *Resilient Management* and my own, *An Elegant Puzzle*. The management career isn't an easy one, but increasingly there are maps available for navigating it. On the other hand, the transition into Staff Engineer, and its further evolutions like Principal and Distinguished Engineer, remains challenging and undocumented. What are the skills you need to develop to reach Staff Engineer? Are technical abilities alone sufficient to reach and succeed in that role? How do most folks reach this role? What is your manager's role in helping you along the way? Will you enjoy being a Staff Engineer or you will toil for years to achieve a role that doesn't suit you? "Staff Engineer: Leadership beyond the management track" is a pragmatic look at attaining and operate

in these Staff-plus roles.
