A myth from the colonial period was that Americans could defend themselves by keeping a rifle in the closet and when needed, grab it, and march off to battle in times of crisis. Unfortunately, providing national defense is more complicated than that; indeed it was more complicated even during the Revolutionary war. General George

Washington ' s struggles to form a standing army supported by workable logistics and supply processes and to get funding for both from the Revolutionary Congress are well documented. Financing national defense requires planning and resourcing in advance. Reacting at the instant of crisis is too late. Building an educated, highly trained and capable Armed Forces and the acquisition of defense weapons and weapons systems has long lead times and involves making decisions the consequences of which are likely to last for decades. These decisions include how to recruit and retain military and civilian personnel as well as designing, buying and fielding a vast array of ground weapons, ships, aircraft and other weaponry. A decision to buy a major defense weapons system for example sets in motion a chain of other decisions that will affect the U.S., its allies and enemies around the world. Implementation of such decisions is financed through the U.S. federal government and Department of Defense budget processes in a planned yet highly and pluralistic and disaggregated system for determining how to advocate, acquire and allocate scarce resources in a manner that culminates in congressional and presidential approval. In this book we examine the concepts and practices of defense financing, provide a detailed description and analysis of resource policy decision making, financial management and budget execution processes, and analyze the most significant features of the national defense and U.S. federal government resource decision and management system.

The book assesses the numerous factors, including those that characterize the complex budget review and appropriation decision making dynamics of Congress, that make U.S. defense finance and budgeting different from any other system in the world. In addition, in a concluding chapter the book compares U.S. defense policy and budgeting to other nations in different regions of the globe, drawing conclusions about the effects of U.S. defense policy and defense financing abroad in regions including Europe, Russia, the Middle-East and Asia.

The general Method of Lines (MOL) procedure provides a flexible format for the solution of all the major classes of partial differential equations (PDEs) and is particularly well suited to evolutionary, nonlinear wave PDEs. Despite its utility, however, there are relatively few texts that explore it at a more advanced level and reflect the method's current state of development. Written by distinguished researchers in the field, Adaptive Method of Lines reflects the diversity of techniques and applications related to the MOL. Most of its

chapters focus on a particular application but also provide a discussion of underlying philosophy and technique. Particular attention is paid to the concept of both temporal and spatial adaptivity in solving time-dependent PDEs. Many important ideas and methods are introduced, including moving grids and grid refinement, static and dynamic gridding, the equidistribution principle and the concept of a monitor function, the minimization of a functional, and the moving finite element method. Applications addressed include shallow water flow, combustion

and flame propagation, transport in porous media, gas dynamics, chemical engineering processes, solitary waves, and magnetohydrodynamics. As the first advanced text to represent the modern era of the method of lines, this monograph offers an outstanding opportunity to discover new concepts, learn new techniques, and explore a wide range of applications.

Experienced legal academics and mental health professionals explore the current approaches to “dangerousness” and preventive detention. The defining characteristics of those deemed dangerous by society vary according to culture, place, and time, and the contributors to this text have gathered to analyze the policies and practices related to current out-groups such as sex offenders, suspected terrorists, and young offenders in the United States, Scotland, England, and Australia. *Dangerous People* is the result of their research, workshopping, and writing. The text is organized logically and begins with a section on

Parameters that explores the international human rights and legal limitations related to preventive detention schemes. It moves on to Policy, where contributors examine legislative policy, and Prediction, or risk assessment, especially in terms of violent crimes in youth. The section on Practice focuses on recent schemes to prevent re-offending. This text is indispensable as a resource that deals with the practical issues surrounding preventive detention and supervision schemes, the assessment of the risk of future harm in offenders, and different programs and sentencing options for high-risk offenders with mental illnesses. It contains case

examples that bring real-life issues to light and sets forth an agenda to provide effective ways to protect communities from harm.

"Structured clinical management (SCM) is a unified approach to the treatment of people with personality disorder. It is within reach of general mental health professionals without extensive additional training, however, clinical leads, managers, and practitioners can struggle to

implement SCM across complex mental health systems. This book provides an easy-to-read and practical guide on how mental health services can implement SCM into their current clinical pathways. Each chapter outlines a core aspect of the SCM model and its delivery in clinical services. Key principles are highlighted, with case examples included to demonstrate real-world applications. Containing insights from clinical experts, researchers, service users, and practitioners of

SCM from across the UK and Europe, this book will be a valuable resource for qualified and in-training mental health professionals, in particular those working with patients diagnosed with borderline personality disorder and other personality difficulties"--page 4 of cover.

In this book we have introduced the basics of the federal budget process, provided an historical background on the

foundation and development of the budget process, indicated how defense spending may be measured and how it impacts the economy, described and analyzed how Planning, Programming, Budgeting and Execution System (PPBES) operates and should function to produce the annual defense budget proposal to Congress, analyzed the role of Congress in debating and deciding on defense appropriations and the politics of the budgetary process including the use of supplemental appropriations to fund national defense, analyzed budget execution dynamics,

identified the principal participants in the defense budget process in the Pentagon and military commands, assessed federal and Department of Defense (DoD) financial management and business process challenges and issues, and described the processes used to resource acquisition of defense war fighting assets, including reforms in acquisition and linkages between PPBES and the defense acquisition process.

The remarkable growth of financial markets over the past decades has been accompanied by an equally

remarkable explosion in financial engineering, the interdisciplinary field focusing on applications of mathematical and statistical modeling and computational technology to problems in the financial services industry. The goals of financial engineering research are to develop empirically realistic stochastic models describing dynamics of financial risk variables, such as asset prices, foreign exchange rates, and interest rates, and to develop analytical, computational and statistical methods and tools to implement the models and employ them to design and evaluate financial products and processes to manage risk and to meet financial goals. This handbook describes the

latest developments in this rapidly evolving field in the areas of modeling and pricing financial derivatives, building models of interest rates and credit risk, pricing and hedging in incomplete markets, risk management, and portfolio optimization. Leading researchers in each of these areas provide their perspective on the state of the art in terms of analysis, computation, and practical relevance. The authors describe essential results to date, fundamental methods and tools, as well as new views of the existing literature, opportunities, and challenges for future research.

The Forensic Psychologist's Reporting Writing Guide is the first book to provide both student trainees and practitioners with best practice guidance for one of the core skills of their role. Written and edited by an international range of experts from the UK, North America and Australasia, it provides clear advice on a range of assessments, from psychometric tests to personality functioning, and

includes real-life examples to illustrate key points.

Uniquely, the book also offers guidance on the range of different client groups that forensic psychologists work with across both civil and legal contexts, including juveniles, female clients, couples and those with cognitive impairments. From core principles to writing style to key issues, each chapter also includes a checklist of advice and further reading. Comprehensive and practical, The Forensic Psychologist's Reporting

Writing Guide is a user-friendly companion to this critical and often overlooked skill, and will be essential reading for both neophyte and experienced forensic psychologists alike.

Drawing on the latest evidence from the disparate worlds of mental health and criminal justice, *Managing Personality Disordered Offenders in the Community* provides a practical guide to the management and treatment of a group who comprise some of the most troubled

offenders, who provoke the most anxiety in our society. Illustrated throughout with relevant case examples, this book provides a detailed account of key issues in the assessment of both personality disorder and offending. Dowsett and Craissati explore the current state of knowledge regarding treatment approaches, before suggesting a framework for thinking about community management, legislation, and multi-agency practice. The book concludes with a discussion of community pilot projects currently taking place throughout England and Wales. *Managing Personality Disordered Offenders in the Community* is an accessible and informative guide for trainees and practitioners working in the fields

of mental health, social services, and the criminal justice system.

In the almost ten years since the publication of the first edition of *Motor Fleet Safety and Security Management*, the availability of new methods of transportation has made travel faster, and consequently, safety and security have become more important and more complex. Businesses must now become proactive in their own security and planning for emergencies. This second edition of a bestselling resource provides a complete understanding of how to develop and manage a comprehensive motor fleet safety and instructional program. It presents the underlying concepts, basic

techniques, and principles of motor fleet safety and security management. New, Revised, and Expanded Topics in the Second Edition: Elements of a fleet safety program Accident prevention Consideration for small-fleet driver selection, training, instruction, and supervision Vehicle inspection How to organize accident data Job safety analysis (JSA) meetings for commercial drivers Fleet transportation publicity School bus safety Shipping and storage of hazardous materials Security in transportation Model of a motor fleet transportation program designed to assist in the implementation of a program To achieve optimum safety, everyone

involved in the transportation system should be adequately trained, supervised, and monitored. Proper data and incident reports must be maintained to identify trends and problem areas. Keeping the trademark style that made the previous edition so popular, the author addresses the critical steps for successful driver selection, training, instruction, and supervision. He provides you with the foundation you need to combat common problems and manage your motor fleet transportation system.

This book includes papers presented at ESCAPE-10, the 10th European Symposium on Computer Aided Process -Engineering, held

in Florence, Italy, 7-10th May, 2000. The scientific program reflected two complementary strategic objectives of the 'Computer Aided Process Engineering' (CAPE) Working Party: one checked the status of historically consolidated topics by means of their industrial application and their emerging issues, while the other was addressed to opening new windows to the CAPE audience by inviting adjacent Working Parties to cooperate in the creation of the technical program. The former CAPE strategic objective was covered by the topics: Numerical Methods, Process Design and Synthesis, Dynamics & Control, Process Modeling, Simulation and

Optimization. The latter CAPE strategic objective derived from the European Federation of Chemical Engineering (EFCE) promotion of scientific activities which autonomously and transversely work across the Working Parties' terms of references. These activities enhance the exchange of the know-how and knowledge acquired by different Working Parties in homologous fields. They also aim to discover complementary facets useful to the dissemination of tools and of novel procedures. As a consequence, the Working Parties 'Environmental Protection', 'Loss Prevention and Safety Promotion' and 'Multiphase Fluid Flow' were invited to assist in the organization of sessions in the area of: A Process Integrated Approach for: Environmental Benefit, Loss Prevention and Safety, Computational Fluid Dynamics. A total of 473 abstracts from all over the world were evaluated by the International Scientific Committee. Out of them 197 have been finally selected for the presentation and reported into this book. Their authors come from thirty different countries. The selection of the papers was carried out by twenty-eight international reviewers. These proceedings will be a major reference document to the scientific and industrial community and will contribute to the progress in Computer Aided Process Engineering.
