A basic problem in  
computer vision is to  
understand the structure  
of a real world scene  
given several images of it.  
Techniques for solving  
this problem are taken  
from projective geometry  
and photogrammetry.  
Here, the authors cover  
the geometric principles  
and their algebraic  
representation in terms of  
camera projection  
matrices, the fundamental  
matrix and the trifocal  
tensor. The theory and  
methods of computation  
of these entities are  
discussed with real  
examples, as is their use  
in the reconstruction of  
scenes from multiple  
images. The new edition  
features an extended  
introduction covering the  
key ideas in the book  
(which itself has been  
updated with additional  
examples and  
appendices) and  
significant new results  
which have appeared  
since the first edition.  
Comprehensive  
background material is  
provided, so readers

familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented, and implement the algorithms directly from the book.

The discovery of rules for the systematicity and dynamics of terminology creations is essential for a sound basis of a theory of terminology. This quest provides the driving force for *The Dynamics of Terminology* in which Dr.

Kageura demonstrates the interaction of these two factors on a specific corpus of Japanese terminology which, beyond the necessary linguistic circumstances, also has a model character for similar studies. His detailed examination of the relationships between terms and their constituent elements, the relationships among the constituent elements and the type of conceptual combinations used in the construction of the terminology permits deep insights into the systematic thought processes underlying term creation. To compensate for the inherent limitation of a purely descriptive analysis of conceptual patterns, Dr. Kageura offers a quantitative analysis of the patterns of the growth of terminology. His fascinating and unique contribution to our understanding of the terminological process reveals the powerful interaction of linguistic possibilities and the naming process of conceptual entities. *The Camera Assistant's Manual* Butterworth-Heinemann
