You too? Oh, of course you do! Definitely. Don't you also admire those delicate, romantic

floral images you find from time to time when browsing the web? Airy, light and incredibly fragile formations - impossible to find something like this in the nature. Those formations look like paintings but they are not. They are photographs. As well, the romantic ocean views evoke our longing for the sea and the beach. Still, other photos that look as if they had sprung from the distant past. Painted on canvas, painted on wood, painted in times of the romantics. As different as all those pictures may be, they have two things in common: First, they are layered with one or more textures and digitally retouched. Secondly, the intention was not to improve the picture,

to let it look “ like it was “ , but to transform an imagined reality into visible truth. Before pictures can turn into art, the question of “ How do I work with textures at all? ” presents itself. Because art and skill are invariably linked, and skill is derived from knowledge, the first requirement you have to attain is this knowledge. But you don't have to reinvent the wheel. That's the reason why we created this little e-book for you. We have compiled lots of tips, inspiration, a step-by-step-guide and interviews on the topic of “ texture ” .

Increasing numbers of ecologists and conservation biologists have begun to explore the use of drone technology to obtain accurate and up-to-date data on the distribution and density of species, as well as the threats to their habitats, in their ongoing attempts to conserve and monitor biodiversity.

Conservation drones are low-cost, autonomous, and operator-friendly unmanned aerial vehicles that can be used for surveying, mapping, and

monitoring both habitat and biodiversity. They are fast becoming a valuable complement to ground-based surveys and satellite imagery for a wide range of ecological and conservation applications. The authors pioneered the use of conservation drones for the purpose of monitoring orangutan populations in Southeast Asia. They subsequently founded Conservation Drones.org to share their knowledge of building and using drones with colleagues in the wider environmental community. This website has proved highly popular and this book aims to further build capacity to use drones and inspire others to adapt emerging
