From foraging patterns in a single tree to social interactions across a home range, how primates use space is a key question in the field of primate behavioral ecology. Drawing on the latest advances in spatial analysis tools, this book offers practical guidance on applying geographic information systems (GIS) to central questions in primatology. An initial methodological section discusses niche modelling, home range analysis and agent-based modelling, with a focus on remote data collection. Research-based chapters demonstrate how ecologists apply this technology to study intensity of range use and travel routes, as well as to population-level questions; how GIS can help to assess the impact of logging, mining and hunting, as well as to inform primate conservation strategies. Offering best practice guidelines on cutting-edge technologies, this is an indispensable resource for any primatologist or student of animal behaviour.

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which States Members of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities. The designations used and the presentation of material in this publication do not imply the expression of any opinion

whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries. The term "country" as used in this publication also refers, as appropriate, to territories or areas. The designations "developed regions" and "developing regions" are intended for statistical convenience and do not necessarily express a judgment about the stage reached by a particular country or area in the development process. Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document.

Few years ago, the topic of aerial robots was exclusively related to the robotics community, so a great number of books about the dynamics and control of aerial robots and UAVs have been written. As the control technology for UAVs advances, the great interaction that exists between other systems and elements that are as important as control such as aerodynamics, energy efficiency, acoustics, structural integrity, and applications, among others has become evident. *Aerial Robots - Aerodynamics, Control, and Applications* is an attempt to bring some of these topics related to UAVs together in just one book and to look at a selection of the most relevant problems of UAVs in a broader engineering perspective.

Tracking technologies such as GPS, mobile phone tracking, video and RFID monitoring are rapidly becoming part of daily life. Technological progress offers huge possibilities for studying human activity patterns in time and space in new ways.

Delft University of Technology (TU Delft) held an international expert meeting in early 2007 to investigate the current and future possibilities and limitations of the application of tracking technologies in urban design and spatial planning. This book is the result of that expert meeting.

This manual is a complete user manual for Garmin handheld receivers. It covers theory and practical applications for gps technology and the receivers that use this technology. Representative products for all of the Garmin handheld receivers, past and present, are explained and tips are given on getting the most out of each model. It is designed to augment the user manuals that are supplied with each product but is complete enough to replace them. While this manual is Garmin specific it provides a basic understanding of gps devices that is applicable to any gps receiver. It was written over a period of 4 years and has been reviewed and tested by hundreds of users over that period. It has been used as the reference for training on gps usage. Because of its unique approach that develops the theory behind operation as well as specific details, it provides a basis that will allow a user to be able to use any gps receiver. Skills in the use of a gps will provide assurance and safety for the user. Topics extend beyond just operating the unit to actually being able to use it for navigation on the land, in the sea, or in the air. Topics are applicable whether you are hiking or driving to your destination. These topics include product operation, waypoints, routes, tracklogs, navigation, maps and databases, product selection, features, theory, accessories, and product unique functions.

INNOVATE was a comprehensive, collaborative, and binational research project. It ran from January 2012 through December 2016. Brazil and Brazil's Northeast in particular suffered from a severe drought period from 2012 onwards. Management and governance of natural resources faced serious challenges related to access to water. Important long-term drivers that call for recurrent adaptation of actions are land use change, population growth, climate change, and conflicts from the multiple uses of water. The scientific project addressed this complex situation through research aimed at suggesting practices and pathways towards ecologically and socioeconomically sound management of land, water and biodiversity. The INNOVATE project had one focus on the entire watershed of the São Francisco River and another one on a portion of the watershed - the Itaparica Reservoir and the semi-arid area north of the artificial lake. Researchers with different backgrounds worked within their disciplines, in groups (interdisciplinary) and together with stakeholders (transdisciplinary). The Guidance Manual is a compilation of actor-relevant content extracted from the scientific research results. Most recommendations put forward can be adapted as principles and standards for reservoir and semi-arid regions elsewhere in the world. INNOVATE war ein umfassendes, bi-nationales Verbundforschungsprojekt zwischen Brasilien und Deutschland, mit einer Kernlaufzeit von Januar 2012 bis Dezember 2016. Im Jahr 2012 begann eine

besonders schwere Dürreperiode, welche nicht nur den sowieso trockenen Nordosten Brasiliens traf, sondern auch weitere Teile des Landes. Die stark eingeschränkte Wasserverfügbarkeit wurde zum zentralen Thema von Management und Governance der natürlichen Ressourcen. Wichtige langfristige Treiber, welche eine kontinuierliche Anpassung des Handelns notwendig machen, sind Landnutzungsänderungen, Bevölkerungswachstum, Klimawandel und Konflikte um die verschiedenen Wassernutzungsansprüche. Im Projekt wurden Praktiken und Ansätze zur ökologisch und sozialökonomisch verträglichen Bewirtschaftung von Wasser, Land und Biodiversität entwickelt. Das Studiengebiet des INNOVATE-Projekts umfasste dabei das gesamte Wassereinzugsgebiet des São Francisco Flusses, wobei Feldforschung im semi-ariden Umland nördlich des Itaparica Stausees stattfand. Forscher und Forscherinnen aus verschiedenen Disziplinen arbeiteten disziplinär, in Gruppen (interdisziplinär) sowie gemeinsam mit Stakeholdern (transdisziplinär). Das vorliegende Handbuch ist eine Zusammenstellung von Stakeholder-relevanten Empfehlungen, welche aus den Ergebnissen der wissenschaftlichen Forschung abgeleitet wurden. Die meisten hier vorgestellten Handlungsempfehlungen können weltweit an vergleichbare Stausee- und semi-aride Regionen angepasst werden.

O livro Cartografia escolar e inteligências múltiplas lança um novo olhar sobre o ensino de Cartografia na educação básica, com atividades planejadas sob o enfoque das Inteligências Múltiplas dos estudantes. A Teoria das Inteligências Múltiplas, proposta por Howard Gardner (1983), afirma que o conceito de Inteligência não é suficiente para abranger todas as habilidades cognitivas humanas. Assim, com base em seus critérios, apresentou, em um primeiro momento, sete tipos de Inteligências. São elas: Verbal, Lógico-Matemática, Corporal-

---

Cinestésica, Espacial, Musical e Pessoal (que se subdivide em Intrapessoal e Interpessoal), realizando o acréscimo da Inteligência Naturalista a sua lista, em 1999. Essa teoria desencadeou uma revolução na aprendizagem, por demonstrar como funciona o cérebro humano. Assim, este livro proporciona uma revisão conceitual, de fácil compreensão, referente às Inteligências Múltiplas e sua aplicabilidade em sala de aula, demonstrando a relação existente entre a Teoria e a Cartografia Escolar. Esta obra apresenta atividades práticas de alfabetização e letramento cartográfico, utilizando recursos geotecnológicos, como o Google Earth, Receptor GPS e Software de mapeamento (QGIS), planejadas para a motivação das Inteligências Múltiplas dos estudantes, colaborando para apreenderem de diversas maneiras. Por esse caráter inovador, marcante e de fácil compreensão e execução, esta leitura é fundamental não apenas para os professores e pesquisadores, mas, também, para aqueles que estabelecem políticas educacionais.

Mulletts (grey mullets) are a family (Mugilidae) and order of ray-finned fish found in temperate and tropical waters worldwide. There are approximately 80 species of mullet; these fish have been considered an important food source in Mediterranean Europe since Roman times. This book provides a long overdue update on the biology and ecology of mullets and features comprehensive coverage of the key features of the Mugilidae family, such as recent DNA evidence and morphological data that challenge the traditional taxonomy.
