The computer and particularly the Internet have been represented as enabling technologies, turning consumers into users and users into producers. The unfolding online cultural production by users has been framed enthusiastically as participatory culture. But while many studies of user activities and the use of the Internet tend to romanticize emerging media practices, this book steps beyond the usual framework and analyzes user participation in the

context of accompanying popular and scholarly discourse, as well as the material aspects of design, and their relation to the practices of design and appropriation.

Pay Inequalities in the European Community presents a comparative analysis of the distribution of earnings from employment in six countries of the European Economic Community: Britain, Belgium, France, the federal Republic of Germany, Italy and the Netherlands. The text covers aspects of the inequality of pay among individual workers: inequality between sectors and industries in the economy; between occupations and between men and women; assessment of the relative importance of the elements in inequality; and factors which may underlie differences in the patterns of distribution between countries such as training and promotion systems, trade union bargaining policies and institutions, and income policies. Economists, labor specialists, and researchers will find the book a good source of information.
