Doing Public Humanities explores the cultural landscape from disruptive events to websites, from tours to exhibits, from after school arts programs to archives, giving readers a wide-ranging look at the interdisciplinary practice of public humanities. Combining a practitioner's focus on case studies with the scholar's more abstract and theoretical approach, this collection of essays is useful for both teaching and appreciating public humanities. The contributors are committed to presenting a public humanities practice that encourages social justice and explores the intersectionalities of race, class, gender, and sexualities. Centering on the experiences of students with many of the case studies focused on course projects, the content will enable them to relate to and better understand this new field of study. The text is essential reading for undergraduate and graduate classes in public

history, historic preservation, history of art, engaged sociology, and public archaeology and anthropology, as well as public humanities.

What are you?
Obviously, you are a
person with human
ancestors that can
be plotted on a
family tree, but you
have other
identities as well.
According to
evolutionary
biologists, you are
a member of the
species *Homo sapiens*
and as such have
ancestral species
that can be plotted
on the tree of life.
According to
microbiologists, you
are a collection of
cells, each of which
has a cellular
ancestry that goes
back billions of
years. A geneticist,
though, will think
of you primarily as
a gene-replication

machine and might produce a tree that reveals the history of any given gene. And finally, a physicist will give a rather different answer to the identity question: you can best be understood as a collection of atoms, each of which has a very long history. Some have been around since the Big Bang, and others are the result of nuclear fusion that took place within a star. Not only that, but most of your atoms belonged to other living things before joining you. From your atoms' point of view, then, you are just a way station on a multibillion-year-long journey. You:

Natural History offers a multidisciplinary investigation of your hyperextended family tree, going all the way back to the Big Bang. And while your family tree may contain surprises, your hyperextended history contains some truly amazing stories. As the result of learning more about who and what you are, and about how you came to be here, you will likely see the world around you with fresh eyes. You will also become aware of all the one-off events that had to take place for your existence to be possible: stars had to explode, the earth had to be hit 4.5

billion years ago by comparability of a planetesimal and 65 million years ago by traffic accident an asteroid, microbes had to engulf microbes, the African savanna had to undergo climate change, and of course, any number of your direct ancestors had to meet and mate. It is difficult, on becoming aware of just how contingent your own existence is, not to feel very lucky to be part of our universe.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes

into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves,

porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.
