Rural Rides is the book for which the English journalist, agriculturist and political reformer William Cobbett is best known. At the time of writing Rural Rides, in the early 1820s, Cobbett was a radical anti-Corn Law campaigner. He embarked on a series of journeys by horseback through the countryside of Southeast England and the English Midlands. He wrote down what he saw from the points of view both of a farmer and a social reformer. The result documents the early 19th-century countryside and its people as well as giving free vent to Cobbett's opinions

American culture has become a culture of fear. Parenting methods and advertising messages scream for safety. Terrorism's threat and the government's response both tell us to take cover. And, of course, social media's unending streams perpetually magnify it all. In this societal context, our business cultures, too, have become cultures of fear. Mistrust is rising between management and co-workers, all seeking to protect personal interests. Advisors push us toward fear-based caution, not opportunity-seeking strategy. External influences -- from the media to regulators to competition -- focus us on avoiding risks rather than moving boldly ahead. *Corporate Bravery* is a book about freeing your business from being a culture of fear. It starts by considering fear's impact on decision-making. Then, it explores eight ways that fear can harm culture. Finally, through a three-step process, it shows how to foster a culture that supports engaged employees, provides opportunities for measured risk-

taking and innovation, and rewards the brave leadership that drives business success.

This book revisits many of the problems encountered in introductory quantum mechanics, focusing on computer implementations for finding and visualizing analytical and numerical solutions. It subsequently uses these implementations as building blocks to solve more complex problems, such as coherent laser-driven dynamics in the Rubidium hyperfine structure or the Rashba interaction of an electron moving in 2D. The simulations are highlighted using the programming language Mathematica. No prior knowledge of Mathematica is needed; alternatives, such as Matlab, Python, or Maple, can also be used.

Throughout time people have made sense of their lives by telling stories. Even the simplest story can connect us with eternal truths and places deep within ourselves from which we may navigate life's greatest challenges. The

human family has a long tradition - from the lyrical verse of the Homeric Greeks to the traveling bards of Ireland - in which the telling of stories drawn from history has been a way to pass down core values, gain perspective and meaning, and transform suffering into healing. Standing at Lemhi Pass, a phrase taken from a pivotal moment during Lewis and Clark's early exploration of the American West, borrows lively stories from American history and applies them to times we are facing loss, grief or any of life's profound challenges. In addition to working as a counselor to terminally ill patients and their loved ones, the author is a historian with an eye for deep, archetypal stories able to speak across cultures. In *Standing at Lemhi Pass*, stories and metaphors sparkle like stars in a night sky. Stars which can help us orient and find our way even in the darkest night.

Scientific computing is the study of how to use computers effectively to solve problems that arise from the mathematical modeling of phenomena in science and engineering. It is based on mathematics, numerical and symbolic/algebraic computations and visualization. This book serves as an introduction to both the theory and practice of scientific computing, with each chapter presenting the basic algorithms that serve as the workhorses of many scientific codes; we explain both the theory behind these algorithms and how they must be implemented in order to work reliably in finite-precision arithmetic. The book includes many programs written in Matlab and Maple – Maple is often used to derive numerical algorithms, whereas Matlab is used to implement them. The theory is developed in such a way

---

that students can learn by themselves as they work through the text. Each chapter contains numerous examples and problems to help readers understand the material “hands-on”.

Embracing Survival, a memoir by Dydine Umunyana, tells the story of the Rwandan Genocide against the Tutsis at the hands of the Hutu perpetrators in Rwanda (1994) through the eyes of the

four-year-old-child that she was when the horrific massacre occurred. Separated from her family, she barely survived the conflict. While the physical killing finally stopped, the mental and emotional 'killing' continued, affecting her and her family. She writes that "I have learned that we cannot do for others what we cannot do for ourselves. By nourishing the light within ourselves, we find strength we never knew was there....I came to realize that one's own life experiences are not theirs to keep but ours to teach."

This supplement is intended to teach the reader how to solve Statics problems using Maple. While the manual suggests ways to use Maple to enhance your understanding of statics and teach you efficient computational skills, you should feel free to browse the Maple manual and create your own methods for solving statics problems and for using Maple. Quality technical documents can be created entirely within maple. This manual is an example of this and demonstrates the software's capability. As a consequence, the input and output for formats presented in this manual are consistent with actual Maple input and output. Explanations are provided for the generation of symbols and operators that do not appear on the standard keyboard. Any input that is executed remains in memory and can be used for future calculations. This Maple manual consists of 11 chapters. The first chapter is a general introduction to Maple that concludes with a sample application and can be studied while reading the first chapter of the accompanying Statics text. This is followed by 10 more chapters where appropriate maple solutions are presented for the sample problems in the text. Chapter 1 - Using Maple Computational Software Numerical Calculation Working with Functions Symbolic Calculations Solving Algebraic Equations Graphs and Plots Applications of Maple to a Statics Problem As well as solutions to sample problems from the main text, this manual also covers the following topics: Maple as a Vector Calculator; Solution of Simultaneous Linear Equations; Using Maple for Other Matrix Calculations; Scalar or Dot Product; Vector or

"A great deal of fun!" -Dr. Larry Hass, philosopher "Purring with happiness!" -Abigail McBride, magician "A charming and subversively "innocent" book that delightfully combines pro-feline sentiments and self-awareness. For those who have become jaded by decades of "visualization techniques", shifting the perspective to "cat consciousness" is both ingenious and refreshing." -Ken Clinger, recording artist "I am curled up in the feline position thoroughly enjoying how to become my own inner kitty. Cats are such enigmas, and this is just a truly delightful and thoughtful exploration of their psychology. I read it all at once; couldn't put it down!" -Alice Warwick, attorney "I don't particularly like cats, but after reading this book, I want to be one for myself. Now that's a magical accomplishment!" -Gordon Meyer, author of Smart Home Hacks "Whether you're allergic to dander, or residential regulations prohibit pets, or your lifestyle doesn't allow for responsible care of vulnerable creatures, the simplest answer is to be your own cat. I wondered if the claim of "instant results" could possibly be true, but you become your own cat during the very first exercise you perform. You can do the steps in any order you wish. I skipped around, and the results weren't adversely affected. Lots of good laughs along the way." -Cassandra Farley, Univ. of Florida "It's commonly known that you can be your own best friend or your own worst enemy. It's even well established that you can be your own grandpa. But it takes a Professor Oddfellow to teach you How to Be Your Own Cat--and isn't it about time?" -Jonathan Caws-Elwitt, playwright "This is paws-down best cat book ever ... because it's not cutesy. Though obviously playful in tone, the tips are actually serious, and they honestly DO work! This book goes straight to the heart of what makes a cat tick, allowing anyone to genuinely become his or her own feline." -Donna Clark, artist "I have carefully read this spiritual manual and can attest that

every single exercise is spiritually correct and--when performed correctly--is guaranteed to be productive of its intended result." -William Keckler, poet "I've always admired the way cats approach the world with an air of mystery. Now I know why and how they do it. This book reveals feline secrets that I've never seen discussed anywhere else. It's a delight for any animal lover." -A., chef "Well-thought and whimsically delivered -- puts you in touch with your inner feline. Along with carefully chosen, classic illustrations, this guide is reminiscent of an early 18th century manual. Each passage is a contemplation that is a door to a Zen practice. While we are reminded of our baser animal selves, we are also reminded of the Zen nature of our being. Our feline friends remind us of our true essence and stillness. A delightful book that reflects on our spiritual core in a playful, catlike way." -David Manley, puppeteer "What is the difference between you and a cat? If you have to ask, you're not a cat. And so this book--agile and quick, mysterious, surprising and sly as any cat--is not for you. It is for the cat that you are, the cat that you can be. Of course you want to be your own cat. If you were your cat, you'd know that you'd always wanted to be your cat. But each of the cat's nine lives is lived in nine dimensions and so this book is an introduction to feline physics, a mouser grimoire, a grimalkin guide, a siamese travelogue, a numinous catalogue of the non-Cartesian, a Manx how-to, a tabby joke book of recipes and kitten lore for the aspiring puss or tom, domestic ocelot, jaguar or lynx. Yes, perhaps by now it is clear why you want to be your own cat. In this book, the erudite Professor Oddfellow, already always part shimmering and inscrutable cat, explains how. The only question, now, is when?" -Gary Barwin, novelist

Arvid Falk is a young and idealistic government worker who always wanted to be a poet. When a journalist writes a newspaper exposé based on Arvid’s stories about his useless government department, Arvid is fired immediately. Starting afresh he sets out to explore every corner of the Swedish society, and the hypocrisy and corruption he finds shocks him. Walking the streets of Stockholm will never be the same again once this novel gets under your skin. Named the first modern Swedish novel, ‘The Red Room’ (1879) is wonderfully insightful and ironic. The Charles Dickens influence is undeniable and Strindberg’s writing has been rightfully compared to that of Henrik Ibsen as well. August Strindberg (1849-1912) was a world-famous Swedish playwright, who, in Sweden, was known for his novels, poems, essays and paintings as well. Along with Henrik Ibsen, Hans Christian Andersen, Søren Kierkegaard and Selma Lagerlöf he is one of the all-time most influential authors of Scandinavia.
