The purpose of this book is to illustrate the magnificence of the fables semiconductor ecosystem, and to give credit where credit is due. We trace the history of the semiconductor industry from both a technical and business perspective. We argue that the development of the fables business model was a key enabler of the growth in semiconductors since the mid-1980s. Because business models, as much as the technology, are what keep us thrilled with new gadgets year after year, we focus on the evolution of the electronics business. We also invited key players in the industry to contribute chapters. These "In Their Own Words" chapters allow the heavyweights of the industry to tell their corporate history for themselves, focusing on the industry developments (both in technology and business models) that made them successful, and how they in turn drive the further evolution of the semiconductor industry.

How medieval Europe's infatuation with expensive, fragrant, exotic spices led to an era of colonial expansion and discovery: "A consummate delight." —Marion Nestle, James Beard Award-winning author of *Unsavory Truth* The demand for spices in medieval Europe was extravagant—and was reflected in the pursuit of fashion, the formation of taste, and the growth of luxury trade. It inspired geographical and commercial exploration, as traders pursued such common spices as pepper and cinnamon and rarer aromatic products, including ambergris and musk. Ultimately, the spice quest led to imperial missions that were to change world history. This engaging book explores the demand for spices: Why were they so popular, and why so expensive? Paul Freedman surveys the history, geography, economics, and culinary tastes of the Middle Ages to uncover the surprisingly varied ways that spices were put to use—in elaborate medieval cuisine, in the treatment of disease, for the promotion of well-being, and to perfume important ceremonies of the Church. Spices became symbols of beauty, affluence, taste, and grace, Freedman shows, and their expense and fragrance drove the engines of commerce and conquest at the dawn of the modern era. "A magnificent, very well written, and often entertaining book that is also a major contribution to European economic and social history, and indeed one with a truly global perspective." —American Historical Review
