`This book, a first in its kind, offers a survey of the present state of affairs in media accessibility research and practice. It focuses on professional practices which are relative newcomers within the field of audiovisual translation and media studies, namely, audio description for the blind and visually impaired, sign language, and subtitling for the deaf and the hard-of-hearing for television, DVD, cinema, internet and live performances.Thanks to the work of lobbying groups and the introduction of legislation in some countries, media accessibility is an area that has recently gained marked visibility in our society. It has begun to appear in university curricula across Europe, and is the topic of numerous specialised conferences. The target readership of this book is first and foremost the growing number of academics involved in audiovisual translation at universities ? researchers, teachers and students ? but it is also of interest to the ever-expanding pool of practitioners and translators, who may wish to improve their crafts. The collection also addresses media scholars, members of deaf and blind associations, TV channels, and cinema or theatre managements who have embarked on the task of making their programmes and venues accessible to the visually and hearing impaired.Table of contentsAcknowledgementsJorge DIAZ CINTAS, Pilar ORERO, Aline REMAEL: Media for all: a global challengeSection 1: Subtitling for the deaf and hard-of-hearing (SDH) Aline REMAEL: Sampling subtitling for the deaf and the hard-of-hearing in EuropeClive MILLER: Access symbols for use with video content and information and communications technology devicesChristopher STONE: Deaf access for Deaf people: the translation of the television news from English into British Sign LanguageJoselia NEVES: A world of change in a changing worldVera Lucia SANTIAGO ARAUJO: Subtitling for the deaf and hard-of-hearing in BrazilSection 2: Audio description (AD) Pilar ORERO: Sampling audio description in EuropeJoan GREENING, Deborah ROLPH: Accessibility: raising awareness of audio description in the UKGert VERCAUTEREN: Towards a European guideline for audio descriptionAndrew SALWAY: A corpus-based analysis of audio descriptionJulian BOURNE, Catalina JIMENEZ HURTADO: From the visual to the verbal in two languages: a contrastive analysis of the audio description of The Hours in English and SpanishKarin De COSTER, Volkmar MUHLEIS: Intersensorial translation: visual art made up by`

When a bad day at work culminates in losing out on a promotion, Jim Sanders shifts into his animal form to let off steam. Then his bad day turns into a bad night-while prowling his Atlantic City neighborhood as a large gray house cat, he's caught in a torrential downpour. What little luck he has washes down the

gutter when his new boss, Andrew Wright, catches him taking shelter on his porch, brings him inside, and starts calling him Mr. Frosty. As a feline, Jim becomes the inadvertent confessor for his boss's lonely son, Tony, a victim of schoolyard bullying. As a human, he feels drawn to Andrew, a man he wanted to resent. Finding love was never part of Jim's plan for the future-not with his bizarre secret-yet suddenly he finds himself navigating that minefield anyway. But not everything is easy, especially for an interracial gay couple dealing with prejudice in the workplace, at Tony's school, and even within their own families.

Utopian thought and experimental approaches to societal organization have been rare in the last decades of planning and politics. Instead, there is a widespread belief in ecological modernization, that sustainable societies can be created within the frame of the current global capitalist world order by taking small steps such as eco-labeling, urban densification, and recycling. However, in the context of the current crisis in which resource depletion, climate change, uneven development, and economic instability are seen as interlinked, this belief is increasingly being questioned and alternative developmental paths sought. This collection demonstrates how utopian thought can be used in a contemporary context, as critique and in exploring desired futures. The book includes theoretical perspectives on changing global socio-environmental relationships and political struggles for alternative development paths, and analyzes micro-level practices in co-housing, alternative energy provision, use of green space, transportation, co-production of urban space, peer-to-peer production and consumption, and alternative economies. It contributes research perspectives on contemporary green utopian practices and strategies, combining theoretical and empirical analyses to spark discussions of possible futures.

This concise, easy-to-use book offers expert insights into current controversies in vascular neurosurgery with a view to providing the practitioner with authoritative practical guidance that will assist in the management of difficult disease entities. While vascular neurosurgery has undergone unprecedented advances during the past decade, enabling safer and easier access to previously untreatable pathology, this progress has been accompanied by confusion as to what constitutes best, or even acceptable, practice. Here, experts in the field discuss the various tools available and explain how best to use them when confronted by different pathologies, drawing upon their personal experience. Each chapter focuses on a specific case that is discussed by two experienced surgeons; a third author then evaluates the case, highlighting the available evidence and pearls in the treatment of that particular disease. The authors have been carefully chosen to provide a truly balanced viewpoint on paradigms that they themselves use. They therefore have a sound understanding of the thought processes of surgeons when dealing with challenging diseases for which there may be no single correct path. Furthermore, they are well placed to identify not only appropriate uses of new treatment options and technologies but also circumstances in which their use is best avoided. The ultimate benefactor of this book will be the patient: our biases as physicians should never become a patient's morbidity.

As John Casti wrote, "Finally, a book that really does explain consciousness." This groundbreaking work by Denmark's leading science writer draws on psychology, evolutionary biology, information theory, and other disciplines to argue its revolutionary point: that consciousness represents only an infinitesimal fraction of our ability to process information. Although we are unaware of it, our brains sift through and discard billions of pieces of data in order to allow us to understand the world around us. In fact, most of what we call thought is actually the unconscious discarding of information. What our consciousness rejects constitutes the most valuable part of ourselves, the "Me" that the "I" draws on for most of our actions--fluent speech, riding a bicycle, anything involving expertise. No wonder that, in this age of information, so many of us feel empty and dissatisfied. As engaging as it is insightful, this important book encourages us to rely more on what our instincts and our senses tell us so that we can better appreciate the richness of human life.
