Material flow management offers enterprises a high potential for realizing new economic competitive advantages. The eco-efficient optimization of material flow cutS costs while simultaneously achieving long-term ecological sustainability. This book summarises the fundamental concepts and tools of material flow management, and presents contemporary methods and findings. Case studies illustrate the results from recent research projects conducted in cooperation with industrial companies.

In this book, the IOM makes recommendations for permitting independent practice for mental health counselors treating patients within TRICARE--the DOD's health care benefits program. This would change current policy, which requires all counselors to practice under a physician's supervision without regard to their education, training, licensure or experience.

Review of previous edition: "This will be of particular importance to companies that act as suppliers to larger multinational organisations, whose original specifications may not translate readily into local practice". Quality Today Small and medium-sized companies face many challenges today; not least that their larger institutional and multinational customers make demands that are difficult to meet for an organisation with limited resources. One such demand is ISO 9000 compliance. Fully revised and updated, ISO 9001: 2000 for Small Businesses explains the new requirements of ISO 9001: 2000 and helps businesses draw up a quality plan that will allow them to meet the challenges of the market place. For engineers and managers in small and medium sized companies, and also in service industries and user groups, the text will serve as a essential guide to the most important new developments in quality assurance.

Rural livelihoods and social protection (SP) are highly correlated in Africa. The poor rural population makes the larger share of social protection clients on the continent. Improving coherence between social protection and other sources of rural earnings have the potential to improve the well-being of the rural poor. Despite this, the effort to advance articulation of SP with other rural development programmes and projects has often been undermined by the sectoral approach often pursued in most African countries, including Ethiopia. This study is therefore meant to assess the coherence between social protection, health and nutrition services, and agriculture by taking the case of Improved Nutrition through Integrated Basic Social Services with Social Cash Transfer (IN-SCT) in Productive Safety Net Programme (PSNP) setting in Ethiopia. The IN-SCT as an integral part of PSNP 4, was designed to pilot specific elements of PSNP4 (i.e. health/nutrition service linkage and nutrition sensitive agriculture) for scaling up during the roll out of the programme. This paper is being published in the context of a partnership between FAO, IFAD and the Universidad de los Andes (UNIANDES) and its Centro de Estudios en Desarrollo Económico (CEDE) based in Bogotá, Colombia.

This book presents new studies dealing with the attempts made by the scientists and practitioners to address contemporary issues in geotechnical engineering such as characterization of soil, geomaterials, soil stability and some other geomechanics issues that are becoming quite relevant in today's world. Papers were selected from the 5th GeoChina International Conference on Civil Infrastructures Confronting Severe Weathers and Climate Changes: From Failure to Sustainability, held on July 23-25, 2018 in Hangzhou, China.

The Sourcebook on the Foundations of Social Protection Delivery Systems synthesizes real-world experiences and lessons learned of social protection delivery systems from around the globe. It takes a broad view of social protection, covering various intended populations such as poor or low-income families, unemployed workers, persons with disabilities, and individuals facing social risks. It discusses many types of interventions that governments provide to individuals, families, or households, including categorical programs, poverty-targeted programs, labor benefits and services, disability benefits and services, and social services. The Sourcebook seeks to address concrete "how-to?" questions, including: • How do countries deliver social protection benefits and services? • How do they do so effectively and efficiently? • How do they ensure dynamic inclusion, especially for the most vulnerable and needy? • How do they promote better coordination and integration—not only among social protection programs but also among programs in other parts of government? • How can they meet the needs of their intended populations and provide a better client experience? The delivery systems framework elaborates on the key elements of that operating environment. The framework is anchored in core implementation phases along the delivery chain. Key actors, including people and institutions, interact all along that delivery chain. Those interactions are facilitated by communications, information systems, and technology. This framework can apply to the delivery of one or many programs and to the delivery of adaptive social protection. The Sourcebook structures itself around eight key principles that can frame the delivery systems mind-set: 1. There is no single blueprint for delivery systems, but there are commonalities, and those common elements constitute the core of the delivery systems framework. 2. Quality of implementation matters, and weaknesses in any of the core elements will negatively affect the entire system, reducing the impacts of the program(s) they support. 3. Delivery systems evolve over time, in a nonlinear fashion, and their starting points matter. 4. Efforts should be made to "keep it simple?" and to "do simple well,?" from the start. 5. The "first mile?"—people's direct interface with administrative functions—is often the weakest link in the delivery chain; improving it may take systemic change but will greatly improve overall efficiencies and mitigate the risk of failures on the frontlines. 6. Social protection programs do not operate in a vacuum, and thus their delivery systems should not be developed in silos; synergies across institutions and information systems are possible and can improve program outcomes. 7. Social protection delivery systems can contribute more broadly to government's ability to serve other sectors, such as health insurance subsidies, scholarships, social energy tariffs, housing benefits, and legal services. 8. The dual challenges of inclusion and coordination are pervasive and perennial and encourage the continuous improvement of delivery systems, through a dynamic, integrated, and human-centered approach.

The biomass based energy sector, especially the one based on lignocellulosic sources such as switchgrass Miscanthus, forest residues and short rotation coppice, will play an important role in our drive towards renewable energy. The biomass feedstock production (BFP) subsystem provides the necessary material inputs to the conversion processes for energy production. This subsystem includes the agronomic production of energy crops and the physical handling and delivery of biomass, as well as other enabling logistics. Achieving a sustainable BFP system is therefore paramount for the success of the emerging bioenergy sector. However, low bulk and energy densities, seasonal and weather sensitive availability, distributed supply and lack of commercial scale production experience create unique challenges. Moreover, novel region specific feedstock alternatives continue to emerge. Engineering will play a critical role in addressing these challenges and ensuring the techno-economic feasibility of this sector. It must also integrate with the biological, physical and chemical sciences and incorporate externalities, such as social/economic considerations, environmental impact and policy/regulatory issues, to achieve a truly sustainable system. Tremendous progress has been made in the past few years while new challenges have simultaneously emerged that need further investigation. It is therefore prudent at this time to review the current status and capture the future challenges through a comprehensive book. This work will serve as an authoritative treatise on the topic that can help researchers, educators and students interested in the field of biomass feedstock production, with particular interest in the engineering aspects. ? ?

Integrating Business Management Processes: Volume 3: Harmonising Quality, Food Safety and Environmental Processes (978-0-367-48547-4) Shelving Guide: Business & Management The backbone of any organisation is its management system. It must reflect the needs of the organisation and the requirements of its customers. Compliance with legal requirements and ethical environmental practices contributes towards the sustainability of the management system. Whatever the state of maturity of the management, this book, one of three, provides useful guidance to design, implement, maintain and improve its effectiveness and is intended to provide readers with practical "how to" methods for integrating quality, safety and environmental management processes. This volume sets out procedures and flowcharts to show how the integration of these processes can be achieved. Separated into management procedures, core procedures, support procedures and assurance procedures and complemented by practical examples, this book is an invaluable resource for complete systems development and integration. This book, along with its two companion volumes, is a practical guide for real managers, designed to help them manage their business more effectively and gain competitive advantage. Titus De Silva is a consultant in management skills development, pharmacy practice, quality management and food safety and an advisor to the newly established National Medicines Regulatory Authority (NMRA) in Sri Lanka.
