Thor By Jason Aaron Rotovision

Australia's military consistently punches above its weight, and its approach to leadership is the key to its success. Developed over a century ago by fusing national values with battlefield imperatives, its approach has been fine-tuned over generations. It is now an adaptable and egalitarian leadership culture that ticks all the boxes for best practice. The military assumes no-one is born a natural leader, and that good training makes good leaders. Drawing on his own long military career and defence training programs, and on research, Nick Jans has identified the core principles of this consistently successful approach to leadership. These '3Rs' are the leadership skills which generate loyalty and commitment at an operational level, and they are just as successful in everyday team management as they are in the field. Leadership Secrets of the Australian Army includes real stories from the field and from workplaces, from everyday employees and from well-known leaders. It shows how you too can become a leader your team can believe in, and-equally importantly-how you can help them believe in themselves. 'Read it and be wise.' Lieutenant General David Morrison, AO

A singing frog reluctantly babysits a duck egg in this sweetly hilarious picture book from the brilliant mind that brought you The Fantastic Flying Books of Mr. Morris Lessmore. While egg-sitting for his friend Kack Kack the duck, Bently Hopperton the frog is so bored that he cannot resist painting the egg's shell. But when the decorated egg is mistaken for an Easter egg and is egg-napped, Bently discovers that he has in fact, grown terrifically fond of that ole egg. Can he rescue the egg before it's too late? An homage to fatherhood, and the appreciation of swell art.

Refusing to restrict itself to merely analysing the traditional graphic elements of cover art, this book goes into depth about the physical packaging itself, exploring formats, bindings, casings, materials, textures and finishes. From movie to music packaging, it explores the creative inspiration behind the packaging, looking at the artwork, typography, materials, printing techniques and formats. However, it also goes into detail about the practical considerations and restrictions, such as record company stipulations and the inclusion of essential materials and budgets. The book presents award-winning work from the last decade, showing how designers exploit the qualities of CD and DVD packaging to create highly collectible works of art.

Paula D'Arcy was only 27 when a drunk driver killed her husband and young daughter. But in the midst of crushing despair, she discovered a presence that responded to her fearful cries with great tenderness and wisdom. In this captivating work, D'Arcy recounts the way night slowly became day again--and the perspective shift that allowed her to find meaning in life again. If you've experienced great loss, or if you're feeling lost in the darkness yourself, Stars at Night can offer reassurance that pain does not have the final say.

A Paraphrase on the Four Evangelists Dorling Kindersley Ltd

The defenestration of a ruthless theatre impresario's young son was definitely not the best way to end the play's first night party. And the crime scene itself was most unusual: a locked bedroom, with no sign of forced entry, no prints or traces of blood, just a sinister, life-size puppet of Mr Punch lying on the floor... Everyone at the party - from the dodgy producer and rakish male lead to the dour set designer and the assistant stage manager (the wild daughter of a prominent civil servant) - is a suspect. It's a perfect case for Bryant and May and the Peculiar Crimes Unit but the Home Office, wary of the PCU's eccentric methods and intensely aware of the potential political embarrassment, wants them off the investigation. The elderly detectives are not so easily deterred, however. Delving into the history of London theatre and the gruesome origins of 'Punch and Judy', they uncover a maniacal killer is at work - one who must be caught before it's curtains for everyone!

Chemical structure and bonding. The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements. It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures, molecular electronics, designed molecular solids, surfaces, metal clusters and supramolecular structures. Physical and spectroscopic techniques used to determine, examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves. Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant. The individual volumes in the series are thematic. The goal of each volume is to give the reader, whether at a university or in industry, a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience. Thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole. The most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed. A description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate, if it has not been covered in detail elsewhere. The coverage need not be exhaustive in data, but should rather be conceptual, concentrating on the new principles being developed that will allow the reader, who is not a specialist in the area covered, to understand the data presented. Discussion of possible future research directions in the area is welcomed. Review articles for the individual volumes are invited by the volume editors

"This collection of essays once again shows that Greg Johnson is a major figure in the movement promoting explicit White identities and interests. These essays are consistently insightful, beautifully and clearly written, and rigorously argued. Reading them, I am continually impressed by how Greg is able to make difficult issues simple and understandable, to the point that a lot of readers will be asking themselves why they have taken so long to realize the dire straits that Whites and their civilization are in. Greg's intellectual confidence is infectious to the point that I suspect quite a few readers will come away thinking that the points he is making are not only true, but are obviously true. This book should be distributed far and wide to the converted and unconverted alike. College students, inundated as they are by cultural Marxism, would particularly benefit. The unconverted will sputter with hostility as they begin reading, but I suspect that many will come away with a completely altered worldview." -Kevin MacDonald, author of The Culture of Critique

Raptors are formally classified into five families and include birds—such as eagles, ospreys, kites, true hawks, buzzards, harriers, vultures, and falcons—that are familiar and recognized by many observers. These diurnal birds of prey are found on every continent except Antarctica and can thrive in seemingly inhospitable spots such as deserts and the tundra. They have powerful talons and hooked beaks for cutting and tearing meat, and keen binocular vision to aid in their hunting prowess. Because of their large size, distinctive feeding habits, and long-distance flight patterns, raptors intrigue humans and have been the subject of much general interest as well as extensive scientific research. Keith L. Bildstein has watched and studied raptors on five continents and is well prepared to explain their critical importance, not only as ecological entities but also as inspirational tokens across natural and human-dominated landscapes. His book offers a comprehensive and accessible account of raptors, including their evolutionary history, their relationships to other groups of birds, their sensory abilities, their general natural history, their breeding ecology and feeding behavior, and threats to their survival in a human-dominated world. Biologically sound but readable, Raptors is a nontechnical overview of this captivating group. It will allow naturalists, birders, hawk-watchers, science educators, schoolchildren, and the general public, along with new students in the field of raptor biology, to understand and appreciate these birds, and in so doing better protect them.

Gary Soto writes that when he was five "what I knew best was at ground level." In this lively collection of short essays, Soto takes his reader to a ground-level perspective, resreating in vivid detail the sights, sounds, smells, and textures he knew growing up in his Fresno, California, neighborhood. The "things" of his boyhood tie it all together: his Buddha "spotted with gold," the taps of his shoes and the "engines of sparks that lived beneath my soles," his worn tennies smelling of "summer grass, asphalt, the moist sock breathing the defeat of basesall." The child's world is made up of small things--small, very important things.
