obra *Un hogar para cada niño*, también publicada por la editorial UNED. El manual suma la profesionalidad y metodología de la UNED con la experiencia de más de 40 años de Aldeas Infantiles trabajando con la infancia desprotegida. Este manual tiene un carácter eminentemente práctico y trata de dar respuesta a las preguntas de las familias acogedoras. El libro hace un recorrido por diferentes temas (aspectos médicos, aspectos psicológicos y aspectos legales) que interesan a las familias acogedoras. Así mismo, recoge las vivencias de familias que ya han tenido la experiencia inmensamente gratificante de poder dar un hogar a niños que por diferentes circunstancias no lo tienen.

El bulo siempre ha existido, pero la difusión global, masiva e instantánea gracias a los entornos digitales es algo novedoso. Contagia a toda la sociedad. Nos coloca ante una pandemia de desinformación que nos reclama prevención y vacuna. Con esa idea -----vacunar contra la información falsa----- nace este manual. A los autores -----profesores de la universidad pública e investigadores de las fake news desde distintas perspectivas----- nos llegaban peticiones de sectores como periodistas o profesores de universidad y de Secundaria que anhelaban un manual con lenguaje claro, con ejercicios didácticos y con ejemplos cercanos que ayudaran a entender el fenómeno, y que pudiera usarse indistintamente en redacciones, facultades e institutos. Y con ese propósito hemos trabajado: abordamos desde qué es una fake news hasta cómo se verifica una noticia; desde cómo el cerebro crea sesgos cognitivos que favorecen la desinformación hasta cómo Wikipedia o Facebook dominan el marco ideológico. Estudiamos la producción, la distribución y la recepción de textos, imágenes y sonidos, porque no sólo se miente con palabras. Y exploramos cómo repercute la desinformación en ámbitos diversos como el auge de los populismos o la salud, sobre todo tras la pandemia del Covid-19.

This edition of the Manual of Neonatal Care has been completely updated and extensively revised to reflect the changes in fetal, perinatal, and neonatal care that have occurred since the sixth edition. This portable text covers current and practical approaches to evaluation and management of conditions encountered in the fetus and the newborn, as practiced in high volume clinical services that include contemporary prenatal and postnatal care of infants with routine, as well as complex medical and surgical problems. Written by expert authors from the Harvard Program in Neonatology and other major neonatology programs across the United States, the manual's outline format gives readers rapid access to large amounts of valuable information quickly. The Children's

Hospital Boston Neonatology Program at Harvard has grown to include 57 attending neonatologists and 18 fellows who care for more than 28,000 newborns delivered annually. The book also includes the popular appendices on topics such as common NICU medication guidelines, the effects of maternal drugs on the fetus, and the use of maternal medications during lactation. Plus, there are intubation/sedation guidelines and a guide to neonatal resuscitation on the inside covers that provide crucial information in a quick and easy format.

La finalidad de este libro denominado “Atención a las personas migrantes, de cerca”, es aportar datos y conocimientos específicos sobre los movimientos migratorios desde el continente africano hasta España por vía marítima, a través de la ruta del Mediterráneo occidental. Sus autores, personas con muchos años de experiencia en este campo, a través de sus

doce capítulos nos aproximarán a la realidad de la persona que migra, los motivos que la impulsan a realizar este viaje, su contexto sociocultural, su estado de salud o las principales barreras de acceso. Además, nos muestran la atención sanitaria, social, humanitaria y psicológica que se realiza a su llegada a las costas españolas y posteriormente en los diferentes proyectos que se desarrollan en Cruz Roja Española en Almería. Esta obra pretende ser una herramienta que sirva de modelo para mejorar la atención de profesionales y personas voluntarias a las personas migrantes, con un enfoque de género, transcultural y con una mirada especial a la infancia migrante.

El libro que se presenta es una guía sobre enfermedades infecciosas caninas. La intención es que se trate de un manual útil para la actividad clínica veterinaria, en el que se actualicen conceptos, abordajes diagnósticos, tratamientos y recomendaciones vacunales. El punto de vista es, ante todo, práctico, tratando de que lo reflejado se base en las evidencias científicas publicadas. La medicina basada en la evidencia no debe resultar un concepto abstracto, sino constituir la base de sustentación de nuestra actividad clínica rutinaria. Los capítulos siguen un orden por enfermedades: víricas, bacterianas, protozoarias y fúngicas. La estructura es tradicional, es decir, definición, etiología, incidencia, patogenia, presentación clínica, diagnóstico, tratamiento y prevención, con la intención de resaltar los conceptos más útiles e importantes que nos orienten a la hora de tomar decisiones clínicas: diagnóstico y tratamiento. Se ha decidido qué enfermedades incluir o excluir según dos premisas: incidencia y riesgo zoonótico, porque nuestra profesión requiere conocer y tratar las enfermedades caninas (en este caso) y proteger la salud de las personas. Pese a todo, no es posible escribir un libro y excluir la experiencia clínica en medicina interna veterinaria de los autores. Es algo que tiene los defectos inherentes a las opiniones subjetivas, pero que también tiene las ventajas de la investigación realizada y de la revisión bibliográfica crítica. El objetivo principal de este libro es que pueda resultar de utilidad para el veterinario y que su lectura resulte amena y gratificante.

Epidemiology and Prevention of Vaccine-Preventable Diseases World Health Organization

Developed by subject matter experts at the Centers for Disease Control and Prevention (CDC), *Epidemiology and Prevention of Vaccine-Preventable Diseases*, 14th Edition, "The Pink Book" contains current, credible, and comprehensive information on common vaccine-preventable diseases and provides those who administer immunizations with the latest information on: Principles of vaccination? General best practice guidance on immunization? Immunization strategies for healthcare practices and providers? Child/adolescent/adult immunization schedules? Vaccination data and statistics The Pink Book, 14th Edition serves as an all-in-one reference guide of routine vaccines and includes a wealth of new and

updated material Immunization providers can easily use and reference including: New chapter on Herpes Zoster? New vaccine administration guidelines? New system-level interventions to increase vaccinations? New recommendations regarding selection of storage and temperature monitoring tools? New vaccine deliveries and transport system recommendations including emergencies? New HPV recommendations and vaccine products? New mumps surveillance and reporting guidance? Updated infection control procedures for vaccine administration? Updated "catch up" immunization schedules for children and adolescents? Updated recommendations for adult vaccines? Updated information on available influenza vaccine products? Updated immunogenicity and vaccine effectiveness for Meningococcal? Updated statistics and graphics throughout Considered one of the greatest public health achievements, vaccines protect infants, children, adolescents, and adults from diseases. Because of high vaccine coverage levels in the United States, some diseases prevented by vaccines rarely occur here. However, with vaccine hesitancy on the rise and a disruption to routine immunizations caused by the pandemic, public health could be put at risk for disease outbreaks of mumps, measles, and varicella, meningitis, and pneumonia.

CDC Yellow Book 2018: Health Information for International Travel salud pública

Progress obtained by mycobacteriology in recent years is undeniable with regards to preventing, detecting, and treating cases of tuberculosis, millennial disease that is still present as public health issue worldwide. We present here high-impact research and interest topics related to the application of new methodologies, especially molecular methods for rapid diagnostic such as rapid DST, application of high performance liquid chromatography, molecular epidemiology and molecular diagnostic testing on post mortem. Currently, the constant search for vaccines that prevent the disease is promising through research of the immune response generated by the host towards the bacterium, and the effectiveness that may be achieved from developed vaccines. Another high-impact factor is the one generated by considering tuberculosis as a social disease with an infectious component reflected in research about tuberculosis and human rights. Finally, we present important issues of the pathogen interaction with different hosts. The constant knowledge generation that expands the frontiers of understanding is a key factor for finding solutions and successful activities for public health.

Epidemiology and Prevention of Vaccine-Preventable Diseases, 13th Edition E-Book Grupo Asís Biomedica S.L.

Infectious, or communicable, diseases are a major global health concern. Managing and preventing the spread of diseases takes a concerted public health effort to deal with deadly outbreaks, epidemics and pandemics. What are the various ways in which infectious diseases are spread? How much of a threat are emerging infections such as Ebola, SARS and the Zika virus to large populations of people? And how much of a concern is the growth in

antimicrobial resistance to drugs, such as antibiotics, which are routinely used to treat infection? The World Health Organization estimates that vaccines prevent 2-3 million deaths every year; how effective has immunisation been in Australia at containing and eradicating vaccine-preventable diseases? What are the myths and facts regarding the safety and effectiveness of vaccines, and why do some misconceptions among immunisation objectors persist? This book reveals the global trends and challenges in the fight against the major types of infectious disease, and looks at vaccine-preventable diseases and immunisation in Australia. Are we doing enough to win the ongoing fight against infectious diseases?
