trate de un manual útil para la actividad clínica veterinaria, en el que se actualicen conceptos, abordajes diagnósticos, tratamientos y recomendaciones vacunales. El punto de vista es, ante todo, práctico, tratando de que lo reflejado se base en las evidencias científicas publicadas. La medicina basada en la evidencia no debe resultar un concepto abstracto, sino constituir la base de sustentación de nuestra actividad clínica rutinaria. Los capítulos siguen un orden por enfermedades: víricas, bacterianas, protozoarias y fúngicas. La estructura es tradicional, es decir, definición, etiología, incidencia, patogenia, presentación clínica, diagnóstico, tratamiento y prevención, con la intención de resaltar los conceptos más útiles e importantes que nos orienten a la hora de tomar decisiones clínicas: diagnóstico y tratamiento. Se ha decidido qué enfermedades incluir o excluir segúndos premisas: incidencia y riesgo zoonótico, porque nuestra profesión requiere conocer y tratar las enfermedades caninas (en este caso) y proteger la salud de las

---

personas. Pese a todo, no es posible escribir un libro y excluir la experiencia clínica en medicina interna veterinaria de los autores. Es algo que tiene los defectos inherentes a las opiniones subjetivas, pero que también tiene las ventajas de la investigación realizada y de la revisión bibliográfica crítica. El objetivo principal de este libro es que pueda resultar de utilidad para

el veterinario y que su lectura resulte amena y gratificante.

The World Health Organization's Global Technical Strategy for Malaria 2016- 2030 has been developed with the aim to help countries to reduce the human suffering caused by the world's deadliest mosquito-borne disease. Adopted by the World Health Assembly in May 2015 it provides comprehensive technical guidance to countries and development partners for the next 15 years emphasizing the importance of scaling up malaria

responses and moving towards elimination. It also highlights the urgent need to increase investments across all interventions - including preventive measures diagnostic testing treatment and disease surveillance- as well as in harnessing innovation and expanding research. By adopting this strategy WHO Member States have endorsed the bold vision of a world free of malaria and set the ambitious new target of reducing the global malaria burden by 90% by 2030. They also agreed to

Al hablar sobre las vacunas se tiene la sensación de que constituyen un elemento de la medicina preventiva presente entre nosotros desde siempre, que nos han acompañado siempre. Forman parte de nuestra vida cotidiana,

porque en general todos alguna obligatorio, y no se vez hemos acudido a recibir alguna vacuna, a administrársela a nuestros hijos o a nuestros mayores. Más cercano todavía, en el caso del personal sanitario, que hacen posible la acción de la "vacunación" al prescribirla y/o administrarla. En el pasado, vacunar o vacunarse, era un hecho que, la población o los profesionales sanitarios realizaban sin mayor reflexión al respecto. Se vacunaba, e incluso existía la creencia de que era algo

cuestionaba, pues la población entendía a qué se trataba de un plan preventivo epidemiológico que las autoridades implantaban en beneficio de todos, como así era, y se ha demostrado. Buena prueba de ello son los excelentes resultados frente a importantes enfermedades como viruela, sarampión, poliomielitis, etc. En las sociedades modernas es diferente, hoy todos manejamos información, y todos opinamos y decidimos. Pero la gran dificultad estriba

This Open Access book highlights the ethical issues and dilemmas that arise in the practice of public health. It is also a tool to support instruction, debate, and dialogue regarding public health ethics. Although the practice of public health has always included consideration of ethical issues, the field of public health ethics as a discipline is a relatively new and emerging area. There are

few practical training resources learning about how to integrate issue connected with planning, for public health practitioners, ethical analysis into their day especially resources which include discussion of realistic cases which are likely to arise in the practice of public health. This work discusses these issues on a case to case basis and helps create awareness and understanding of the ethics of public health care. The main audience for the casebook is public health practitioners, including front-line workers, field epidemiology trainers and trainees, managers, planners, and decision makers who have an interest in to day public health practice. The casebook is also useful to schools of public health and public health students as well as to academic ethicists who can use the book to teach distinguishing it from clinical and research ethics.

Public Health Ethics: Cases Spanning the Globe

World Health Organization

Infectious, or communicable, diseases are a major global health concern. Managing and preventing the spread of diseases takes a concerted public health effort to deal with deadly outbreaks, epidemics and pandemics. What are the various ways in which infectious diseases are spread? How much of a threat are emerging infections such as Ebola, SARS and the Zika virus to large populations of people? And how much of a concern is the growth in antimicrobial resistance to drugs, such as antibiotics, which are routinely used to treat infection?

The World Health Organization estimates that vaccines prevent 2-3 million deaths every year; how effective has immunisation been in Australia at containing and eradicating vaccine-preventable diseases? What are the myths and facts regarding the safety and effectiveness of vaccines, and why do some misconceptions among immunisation objectors persist?

This book reveals the global trends and challenges in the fight against the major types of infectious disease, and looks at vaccine-preventable diseases and immunisation in Australia. Are we doing enough to win the ongoing

In spite of recent progress in the harmonization of terminology and processes affecting work on the clinical safety of medicines consensus is needed on standards for many difficult aspects of day-to-day pharmacovigilance that continue to pose problems for both the pharmaceutical industry and drug regulators. The CIOMS V Working Group has generated proposals for pragmatic approaches to dealing with such issues as: classification and handling of individual safety case reports from a variety of sources (spontaneous consumer reports solicited reports literature the

Internet observational studies and secondary data bases disease and other registries regulatory ADR databases and licensor-licensee interactions); new approaches to case management and regulatory reporting practices (proper clinical evaluation of cases incidental vs other events patient and reporter identifiability seriousness criteria expectedness criteria case follow-up criteria and the role and structure of case narratives); improvements and efficiencies in the format content and reporting of periodic safety update reports (PSURs) (including results of an industry survey on PSUR workloads and practices; proposals for high case volume and long time-period reports simplification of certain PSURs

summary bridging reports addendum reports license renewal reports for EU and Japan dealing with old products and other technical details); determination and use of population exposure (denominator) data (sources of data and a guide to analytical approaches for a variety of circumstances). The Group has also taken stock of the current state of expedited and periodic clinical safety reporting requirements around the world with summary data on regulations from more than 60 countries. Recommendations are made for enhancing the harmonization steps already taken as a result of previous CIOMS publications and the ICH process. In addition to dealing with

---

unfinished and unresolved issues from previous CIOMS initiatives the report covers many emerging topics such as those involving new technologies. Its 20 Appendices provide a wealth of detailed explanations and reference information. It is the most comprehensive and recent treatment of difficult pharmacovigilance issues affecting the working practices and systems of drug safety and other pharmaceutical professionals.
