In spite of recent progress in the harmonization of terminology and processes affecting work on the clinical safety of medicines consensus is needed on standards for many difficult aspects of day-to-day pharmacovigilance that continue to

pose problems for both the pharmaceutical industry and drug regulators. The CIOMS V Working Group has generated proposals for pragmatic approaches to dealing with such issues as: classification and handling of individual safety case reports from a variety of sources (spontaneous consumer reports solicited reports literature the Internet observational studies and secondary data bases disease and

other registries regulatory ADR databases and licensor-licensee interactions); new approaches to case management and regulatory reporting practices (proper clinical evaluation of cases incidental vs other events patient and reporter identifiability seriousness criteria expectedness criteria case follow-up criteria and the role and structure of case narratives); improvements and efficiencies in the format content and

reporting of periodic safety update reports (PSURs) (including results of an industry survey on PSUR workloads and practices; proposals for high case volume and long time-period reports simplification of certain PSURs summary bridging reports addendum reports license renewal reports for EU and Japan dealing with old products and other technical details); determination and use of population exposure (denominator) data (sources of data and a guide to analytical approaches for a variety of circumstances). The Group has also taken stock of the current state of expedited and periodic clinical safety reporting requirements around the world with summary data on regulations from

more than 60 countries. Recommendations are made for enhancing the harmonization steps already taken as a result of previous CIOMS publications and the ICH process. In addition to dealing with unfinished and unresolved issues from previous CIOMS initiatives the report covers many emerging topics such as those involving new technologies. Its 20 Appendices provide a wealth of detailed explanations and reference information. It is the most comprehensive and recent treatment of difficult pharmacovigilance issues affecting the working practices and systems of drug safety and other pharmaceutical professionals. El Manual de Salud Pública Amer College of Physicians This practical guide contains seven modules targeted at district and health facility staff. It intends

to meet the demands to improve immunization services so as to reach more infants in a sustainable way, building upon the experiences of polio eradication. It includes materials adapted from polio on planning, monitoring and use of data to improve the service, that can be used at any level. Revising the manual has been a team exercise. There are contributions from a large number of experts, organizations and institutions. This new edition has seven modules. Several new vaccines that have become more readily available and used in recent years have been added. Also the section on integration with other health interventions has been expanded as exciting opportunities and experiences have become evident in the years following the previous edition. Module 1: Target diseases and vaccines Module 2: The vaccine cold chain Module 3: Ensuring safe injections Module 4: Microplanning for reaching every community Module 5: Managing an immunization session Module 6: Monitoring and surveillance Module 7: Partnering with communities.

The World Health Organization's Global Technical Strategy for Malaria 2016- 2030 has been developed with the aim to help countries to reduce the human suffering caused by the world's deadliest mosquito-borne disease. Adopted by the World Health Assembly in May 2015 it provides comprehensive technical guidance to countries and development partners for the next 15 years emphasizing the importance of scaling up malaria responses and moving towards elimination. It also highlights the urgent need to increase investments across all interventions - including preventive measures diagnostic testing treatment and disease surveillance- as well as in harnessing innovation and expanding research. By adopting this strategy WHO Member States have endorsed the bold vision of a world free of malaria and set the ambitious new target of reducing the global malaria burden by 90% by 2030. They also agreed to strengthen health systems address emerging multi-drug and

insecticide resistance and intensify national cross-border and regional efforts to scale up malaria responses to protect everyone at risk.

El bulo siempre ha existido, pero la difusi ó n global, masiva e instant á nea gracias a los entornos digitales es algo novedoso. Contagia a toda la sociedad. Nos coloca ante una pandemia de desinformaci ó n que nos reclama prevenci ó n y vacuna. Con esa idea

-----vacunar contra la informaci ó n falsa----- nace este manual. A los autores -----profesores de la universidad p ú blica e investigadores de las fake news desde distintas perspectivas----- nos llegaban peticiones de sectores como periodistas o profesores de universidad y de Secundaria que anhelaban un manual con lenguaje claro, con ejercicios did á cticos y con ejemplos cercanos que ayudaran a entender el fen ó meno, y que pudiera usarse indistintamente en redacciones, facultades e institutos. Y con ese prop ó sito hemos trabajado: abordamos desde qu é es una fake news hasta c ó mo se verifica una noticia; desde c ó mo el cerebro crea sesgos cognitivos que favorecen la desinformaci ó n hasta c ó mo Wikipedia o Facebook dominan el marco ideol ó gico. Estudiamos la producci ó n, la distribuci ó n y la recepci ó n de textos, im á genes y sonidos, porque no s ó lo se miente con palabras. This report from the Council for International Organizations of Medical Sciences (CIOMS) in collaboration with WHO covers the activities and outputs of the CIOMS/WHO Working Group on Vaccine Pharmacovigilance (2005-2010). This working group brought together experts from both industrialized and emerging countries representing regulatory agencies, vaccine industry, national and international public health bodies including WHO and CIOMS, academia and clinical care, contributing from their different perspectives. The report covers general terms and definitions for vaccine safety and discusses the application of such harmonized tools in vaccine safety surveillance and studies. As well, the report highlights case definitions for adverse events typically reported for vaccines. The report is addressed to those engaged in vaccine safety data collection and evaluation, and will also make a useful reading for others who want to familiarise themselves with vaccine safety terminology.

This Open Access book highlights the ethical issues and dilemmas that arise in the practice of public health. It is also a tool to support instruction, debate, and dialogue regarding public health ethics. Although the practice of public health has always included consideration of ethical issues, the field of public health ethics as a discipline is a relatively new and emerging area. There are few practical training resources for public health practitioners, especially resources which include discussion of realistic cases which are likely to arise in the practice of public health. This work discusses these issues on a case to case basis and helps create awareness and understanding of the ethics of public health care. The main audience for the casebook is public health practitioners, including front-line workers, field epidemiology trainers and trainees, managers, planners, and decision makers who have an interest in learning about how to integrate ethical analysis into their day to day public health practice. The casebook is also useful to schools of public health and public health students as well as to academic ethicists who can use the book to teach public health ethics and distinguish it from clinical

and research ethics.

Public Health Ethics: Cases Spanning the Globe Grupo As í s Biomedica S.L.

Infectious, or communicable, diseases are a major global health concern. Managing and preventing the spread of diseases takes a concerted public health effort to deal with deadly outbreaks, epidemics and pandemics. What are the various ways in which infectious diseases are spread? How much of a threat are emerging infections such as Ebola, SARS and the Zika virus to large populations of people? And how much of a concern is the growth in antimicrobial resistance to drugs, such as antibiotics, which are routinely used to treat infection? The World Health Organization estimates that vaccines prevent 2-3 million deaths every year; how effective has immunisation been in Australia at containing and eradicating vaccine-preventable diseases? What are the myths and facts regarding the safety and effectiveness of vaccines, and why do some misconceptions among immunisation objectors persist? This book reveals the global trends and challenges in the fight against the major types of infectious disease, and looks at vaccine-preventable diseases and immunisation in Australia.
