This book outlines the effects that technology-induced change will have on sport within the next five to ten years, and provides food for thought concerning what lies further ahead. Presented as a collection of essays, the authors are leading academics from renowned institutions such as Massachusetts Institute of Technology, Queensland University of Technology, and the University of Cambridge, and practitioners with extensive technological expertise. In their essays, the authors examine the impacts of emerging technologies like artificial intelligence, the Internet of Things, and robotics on sports and assess how they will change sport itself, consumer behavior, and existing business models. The book will help athletes, entrepreneurs, and innovators working in the sports industry to spot trendsetting technologies, gain deeper insights into how they will affect their activities, and identify the most effective responses to stay ahead of the competition both on and off the pitch.

Preparing the Honda CR and XR for Competition includes Training Tips from Marty Smith, and a detailed look at the CR and RC Honda Factory Race Bikes First published in 1979 as the "Moto-X Fox Guide to Preparing the Honda CR and XR for Competition," this expanded 84-page book was written and photographed by famed 1970's Cycle News editor, racer and motocross journalist Jim "Jimmy the Greek" Gianatsis. Included is a later published 16-page Supplement featuring the 1980 season water-cooled RC Pro-Link monoshock works bikes, and a look at the rare RC125-80 twin cylinder motocross bike. Covered is the development and racing history of the Honda 2-stroke CR production and RC works bikes raced by the Don Jones family with Gary and DeWayne in 1973, through to the exotic RC works machines raced by Marty Smith, Marty Tripes, Pierre Karsmakers, Jimmy Ellis, Graham Noyce and Brad Lackey up through 1980 with the water-cooled Pro-Link bikes. Included is race bike preparation from American Honda factory mechanics Cliff White and Bill Buchka. Honda CR production bike race preparation and tuning is provided by the Moto-X Fox Racing Team, the top privateer team in motocross with tuners Keith Bontranger and Paul Turner for riders Steve Wise, Jim Turner, Larry Wosick and the Honda factory team. There is also a special chapter covering the Honda XR 4-stroke trail bikes and how to prepare them for motocross. Included is "Training Tips from Marty Smith" of Team Honda and 500cc National Motocross Champion. "Preparing the Honda CR and XR for Competition" serves as very interesting reading and a great historical reference guide for dirt bike fans both young and old. Many of the bike preparation and riding tips are still relevant today. A must have for any dirt bike enthusiast or collector.

WALNECK'S CLASSIC CYCLE TRADER, ISSUE #33 Causey Enterprises, LLC

Quad Rotorcraft Control develops original control methods for the navigation and hovering flight of an autonomous mini-quad-rotor robotic helicopter. These methods use an imaging system and a combination of inertial and altitude sensors to localize and guide the movement of the unmanned aerial vehicle relative to its immediate environment. The history, classification and applications of UAVs are introduced, followed by a description of modelling techniques for quad-rotors and the experimental platform itself. A control strategy for the improvement of attitude stabilization in quad-rotors is then proposed and tested in real-time experiments. The strategy, based on the use low-cost components and with experimentally-established robustness, avoids drift in the UAV's angular

position by the addition of an internal control loop to each electronic speed controller ensuring that, during hovering flight, all four motors turn at almost the same speed. The quad-rotor's Euler angles being very close to the origin, other sensors like GPS or image-sensing equipment can be incorporated to perform autonomous positioning or trajectory-tracking tasks. Two vision-based strategies, each designed to deal with a specific kind of mission, are introduced and separately tested. The first stabilizes the quad-rotor over a landing pad on the ground; it extracts the 3-dimensional position using homography estimation and derives translational velocity by optical flow calculation. The second combines colour-extraction and line-detection algorithms to control the quad-rotor's 3-dimensional position and achieves forward velocity regulation during a road-following task. In order to estimate the translational-dynamical characteristics of the quad-rotor (relative position and translational velocity) as they evolve within a building or other unstructured, GPS-deprived environment, imaging, inertial and altitude sensors are combined in a state observer. The text give the reader a current view of the problems encountered in UAV control, specifically those relating to quad-rotor flying machines and it will interest researchers and graduate students working in that field. The vision-based control strategies presented help the reader to a better understanding of how an imaging system can be used to obtain the information required for performance of the hovering and navigation tasks ubiquitous in rotored UAV operation.
