PHILOSOPHY Bing
From the author of the New
York Times bestseller Letters
of Note comes a collection of
75 of history's most interesting,
profound, and sometimes

unknown speeches from a range of scintillating personalities such as Frederick Douglass, Justin Trudeau, Albert Einstein, Meghan Markle, Barbara Jordan, and Ursula K. Le Guin. This thoughtfully curated and richly illustrated collection celebrates oratory old and new, highlighting speeches we know and admire, while also shining a light on profound drafts that were never delivered or have until now been forgotten. From George Bernard Shaw's warm and rousing toast to Albert Einstein in 1930 and the commencement address affectionately given to

graduates at Long Island University by Kermit the Frog, to the chilling public announcement (that was thankfully never made) by President Richard Nixon should Neil Armstrong and Buzz Aldrin become stranded on the moon, *Speeches of Note* honors the words and ideas of some of history's most provocative and inspiring personages. Global Tax Fairness Lanahan Pub Incorporated This essential text for any technician in broadcasting deals with

all the most important digital television, sound radio and multimedia standards. The book provides an in-depth look at these subjects in terms of practical experience. In addition it contains chapters on the basics of technologies such as analog television, digital modulation, COFDM or mathematical transformations between time and frequency domains. The attention in each respective field under discussion is focused on aspects of

measuring techniques and of measuring practice, in each case consolidating the knowledge imparted with numerous practical examples. Since the entire field of electrical communications technology is traversed in a wide arc, those who are students in this field are not excluded either.

The Love Poems of John Donne London, Library Supply In the 20 years since the

publication of the author's multi-contributor volume on defoaming, a vast amount of new work has been published and many new insights have been revealed. A cohesive, single-authored book, *The Science of Defoaming: Theory, Experiment and Applications* provides comprehensive coverage of the topic. It describes the mode of action of antifoams, presenting the relevant theory and the supporting experimental evidence. Beginning with an introductory chapter that discusses the intrinsic properties of foam, the book then describes experimental methods for

measuring foam properties important for studying antifoam action and techniques used in establishing the mode of action of antifoams. Since most commercially effective antifoams are oil based, a chapter is devoted to the entry and spreading behavior of oils and the role of thin film forces in determining that behavior. The book reviews the mode of action of antifoams, including theories of antifoam mechanisms and the role of bridging foam films by particles and oil drops. It also addresses issues related to the effect of antifoam concentration on foam formation by air

entrainment and the process of deactivation of mixed oil – particle antifoams during dispersal and foam generation. For applications where chemical antifoam use is unacceptable, the text examines mechanical means of defoaming, such as the use of rotary devices and ultrasound. The final chapters consider the application of defoaming in radically different contexts including waterborne latex paints and varnishes, machine washing of textiles, gas – oil separation in crude oil production, and cardiopulmonary bypass surgery. Focusing on the basic science of defoaming, this book presents a

balanced view, which also addresses the challenges that may arise for these specific defoaming applications.

Subject Classification, with Tables, Indexes, Etc., for the Subdivision of Subjects Council of Europe Honeyball and Bowers' Textbook on Employment Law is an approach to employment law with strong critical analysis whilst placing it in its wider contexts, in a concise and user-friendly format. Fully updated to take into account the recent significant developments in

this area, including the Equality Act 2010, the key topics on most employment law courses are addressed in detail. An extremely clear writing style allows this text to remain accessible and student-focused, while providing detailed explanations and analysis of the law. The text also includes diagrams and chapter summaries throughout to aid student understanding, while further reading suggestions assist with essay preparation and research. Setting employment law in context, this book considers

both industrial and collective issues as well as examining the increasing role of the EU in UK employment law. A separate chapter on human rights also enables students to understand the role human rights legislation plays in the development of employment law. This book also contains cross referencing to Painter & Holmes' Cases & Materials on Employment Law, ensuring that these two texts continue to complement one another and provide the perfect combination of textbook analysis and the most up-to-

date cases and materials. This text is accompanied by a free Online Resource Centre (www.oxfordtextbooks.co.uk/orc/honeyball12e/) which contains updates to the law and useful weblinks.

Blockchain And Smart Contracts: Design Thinking And Programming For Fintech

Morgan Kaufmann Pub
Innovative as it is, the blockchain technology is getting more and more attention and an increasing number of applications have emerged. This book elaborates on both the design thinking ideas and

technical details in blockchain and smart contracts to help readers delve into the conceptual framework and understand why blockchain is designed as such and how it makes the current system decentralised yet effective. Having this understanding lays the ground for further analysis of blockchain-based solutions and innovative fintech applications. Topics covered in this book include blockchain structure, blockchain ecosystem, design thinking for blockchain, smart contract, fintech and financial services, solution-based problem solving, fintech valuation, and current

issues faced such as privacy protection and solution selection, with the aid of real-life examples and hands-on exercises. Blockchain and Smart Contracts serves as a valuable guide for researchers and practitioners who have interests in the blockchain, smart contract, fintech innovation and applications, design thinking, and technical details. This book is particularly written for anyone who has no technical background and is searching for an initiation into the deep end of blockchain. Those with business, finance and economic interests will find this interesting and easy

to digest.
Final Cut Express HD 3.5 Editing Workshop Classical Art Research Centre
Retells the stories of the prophets, in graphic novel format.
CPHIMS Review Guide CRC Press
Gandhian art is often regarded as the epitome of cultural exchange in antiquity. The ancient region of Gandhara, centred on what is now the northern tip of Pakistan, has been called the ‘crossroads of Asia’. The Buddhist art produced in and around this area in the first few centuries AD exhibits extraordinary connections with other traditions across Asia and as far as the Mediterranean. Since the nineteenth century, the Graeco-

Roman associations of Gandhian art have attracted particular attention. Classically educated soldiers and administrators of that era were astonished by the uncanny resemblance of many works of Gandhian sculpture to Greek and Roman art made thousands of miles to the west. More than a century later we can recognize that the Gandhian artists’ appropriation of classical iconography and styles was diverse and extensive, but the explanation of this ‘influence’ remains puzzling and elusive. The Gandhara Connections project at the University of Oxford’s Classical Art Research Centre was initiated principally to cast new light on this old problem. This volume is

the third set of proceedings of the project's annual workshop, and the first to address directly the question of cross-cultural influence on and by Gandhian art. The contributors wrestle with old controversies, particularly the notion that Gandhian art is a legacy of Hellenistic Greek rule in Central Asia and the growing consensus around the important role of the Roman Empire in shaping it. But they also seek to present a more complex and expansive view of the networks in which Gandhara was embedded. Adopting a global perspective on the subject, they examine aspects of Gandhara's connections both within and beyond South Asia and Central Asia, including the

profound influence which Gandhian art itself had on the development of Buddhist art in China and India.

Art of "X-Men 2" The PowerPC Architecture

This book addresses sixteen different reform proposals that are urgently needed to correct the fault lines in the international tax system as it exists today, and which

deprive both developing and developed countries of critical tax resources. It offers clear and concrete ideas on how the reforms can be achieved and why they are important for a more just and equitable global system to prevail. The key to reducing the tax gap and consequent human rights deficit in poor countries is global financial transparency. Such transparency is essential to curbing illicit financial flows that drain less developed countries of capital and tax revenues, and are an impediment to sustainable development. A major break-through for financial transparency is now within reach. The policy reforms outlined in this book not only advance tax justice but also protect human rights by

curtailing illegal activity and making available more resources for development. While the reforms are realistic they require both political and an informed and engaged civil society that can put pressure on governments and policy makers to act.
