Topics covered include: \* industrial

"As novelist and poet Andrei Codrescu points out in the essay that accompanies this selection of photographs from the Getty Museum's collection, Evans's photographs are the work of an artist whose temperament was distinctly at odds with Beals's impassioned rhetoric. Evans's photographs of Cuba were made by a young, still maturing artist who - as Codrescu argues - was just beginning to combine his early, formalist aesthetic with the social concerns that would figure prominently in his later work."--Jacket.

"Automobile manufacturing began in Canada in the early years of the

twentieth century, a few years after it began in the United States. This is no coincidence, for the first Canadian automobile manufacturers started business as partners of newly established U.S. companies, assembling and selling their partners' cars in Canada"--Abstract, p. v. While building big horsepower has become easier, putting that power down to the pavement is still quite a challenge. Getting great "bite" involves a lot more than sticky tires and a smoky burnout. The suspension system is being put to work in a way it was never designed to operate. A better understanding of exactly what is happening to the suspension when the car launches from a standing start will assist you in maximizing your car's effectiveness on the street or at the track. In *How to Hook and Launch: Traction Mods for the Street & Strip*, author Dick Miller explains the physics behind what gets a car moving from a standing start, and how to best harness the various powers at work. Getting the rear tires to really bite and gain maximum traction is divided into several small steps, and Miller walks you through each phase of the launch. Today's enthusiasts face a wide range of potential traction improvements, from softer tires and basic bolt-ons to complete or partial chassis replacements. Most opt for something in-between, where some well-engineered components are chosen to replace the factory equipment and offer a greater capability and range of adjustment. It is this range of upgrades where Miller spends most of his time, explaining what the parts and pieces do, and how to use them to their highest potential.
