Manual camera controls in iOS 8: Explained | iMore

Manual focus allows you to control the plane where the camera sets its focus (called "hyperfocal point" in photography speak). Before iOS 8 you were only able to tap the part of the screen where you wanted focus to be set, and the iPhone would do its best to make that part focused (and also well exposed).

Manual Focus allows you to over ride your camera's auto focus to achieve the desired detail in every shot. Using the slider in the manual focus function, you will be able to see your image coming in and out of focus. This is a handy feature when shooting an image you would like to get very close to an object, or when trying to mimic macro shots.

Manual focus in iOS works on a scale of 0.0 to 1.0, with macro on one end and "infinity" on the other.

Developers can lock focus at any lens position to achieve focus along any point of that scale. Apple chose to use a scale rather than distance measures because of the way focus is implemented on the iPhone and iPad.
