Manual Focus vs. Autofocus.

Nowadays, photographers have numerous technical mechanisms available to help them achieve a perfect picture. One of these is the auto focus (AF), which sets the focus for the subject automatically.

Focusing Modes |

Understanding Autofocus Modes

However, there are times when manual focus is indeed your best option. Autofocus in Canon DSLRs works well when there is enough contrast (the difference between light tones) on or between subject matter that the camera is able to detect. There are times when subject matter lacks enough contrast for the autofocus to work properly, leaving you with a lens—and really a camera—searching for

focus.
