Natural resources have the transformational potential to support economic and political stability as well as contribute to national prosperity and economic development. However, in countries dependent upon natural resource sectors, poor management of these sectors often contributes to corruption, illicit financial flows (IFFs) and thus, poverty. Adequate transparency and accountability in regulatory management of these sectors is a challenge for resource rich countries. Poor licensing decisions in natural resource management can open a

pandora's box of corruption risks. This manual provides methods and options based on good practices to improve transparency, accountability, and integrity in the regulatory licensing process and integrity due diligence. The manual borrows models from the Basel Core Principle 'fit and proper' concept, and provides options for conducting effective (a) beneficial ownership; (b) criminal/legal; and (c) conflicts of interest checks, with a goal of integrating these into the regulatory licensing process. The manual also identifies common legal framework defects that can facilitate corruption risks, and offers options based on principles of regulatory integrity to reduce these risks. The good practices identified can help countries allocate limited

financial resources in conducting thorough background checks in a cost-effective manner, as well as meet EITI's requirements for public disclosure of beneficial owners and politically exposed persons. These strategies for reducing opportunities for corruption in extractive sectors can help reduce IFFs that can sap resources from the economy and inhibit a country's ability to achieve the Sustainable Development Goals.

Whilst welcoming the motivation behind the Manual and the transparency it brings to the workings of Government, the Committee says that in practice the Manual may be treated as having greater authority than originally

intended, particularly where its content extends beyond matters purely for the Executive. All the work of the Executive, including the Cabinet Manual, is subject to scrutiny by Parliament. The fact that the document is primarily directed at the Executive does not exempt it from this scrutiny. The Committee makes some practical suggestions for specific improvements to the text, focusing particularly on the chapters covering government formation and ministers and Parliament. The Committee also challenges some of the specific content of the draft: the failure to include the convention, acknowledged elsewhere by the Government, that Parliament should have the opportunity to debate decisions to commit troops to armed conflict; guidance on when a Prime Minister should resign following a hung Parliament. The Committee recommends that the House should hold a regular debate on

the Manual. The Committee felt, despite dissatisfaction with parts of the original draft, there was no reason to delay production of an approved version. The new version need not be perfect as it will be subject to further review.
