The benefits of applying TQM in manufacturing are well-known: eliminating product defects, enhancing product design, speeding delivery, and reducing costs. Most people readily agree with the basic premise of TQM, but how many have been able to implement it successfully? What makes it so difficult for TQM to permeate a company? How can an approach to corporate management first developed in Japan take root and flourish in the very different corporate climate of the U.S.?

Division TEACCH, a statewide program in North Carolina, serves people with autism and their families through the School of Medicine at the University of North Carolina at Chapel Hill. TEACCH was one of the first, and remains one of the most comprehensive and effective, programs in the world working with this population. Over the years the puzzling and unusual behavior problems these children present have been among the most interesting and challenging of the enigmas parents and professionals confront. This book is designed to provide information on these behaviors that will be relevant and useful. As with the preceding books in our series, Current Issues in Autism, this volume is based in part on one of the annual TEACCH Conferences held in Chapel Hill in May. The books are not simply published proceedings of the conference papers. Instead, conference participants are asked to develop full-length chapters around their presentations. Other international experts, whose work is beyond the scope of each conference but related to its major theme, are asked to contribute chapters as well. These volumes provide the most up-to-date information on research and professional practice available on the most important issues in autism.

Handbook of Violence Risk Assessment Springer Science & Business Media

This comprehensive Handbook of original chapters serves as a resource for clinicians and researchers alike. Two introductory chapters cover general issues in violence risk assessment, while the remainder of the book offers a comprehensive discussion of specific risk assessment measures. Forensic psychology practitioners, mental health professionals who deal with the criminal justice system, and legal professionals working with violent offenders will find the Handbook of Violence Risk Assessment to be the primary reference for the field.

Great exhibits are never an accident. Planning effective exhibits is a demanding process that requires the designer to consider many different aspects and navigate numerous pitfalls while moving a project from concept to reality. In Museum Exhibition Planning and Design, Elizabeth Bogle offers a comprehensive introduction and reference to exhibition planning and design. This book focuses on both the procedural elements of successful planning, like the phases of exhibit design and all associated tasks and issues, and on the design elements that make up the realized exhibit itself, such as color, light, shape, form, space, and building materials. This helpful guide includes: Breakdown of the design and development project phases used by professional

planner/designers Principles of good design as they pertain to: color, light, shape, form, space, line, balance, accent, rhythm, proportion, and scale Criteria to evaluate an exhibit and measure its success Discussion of construction contracts and procedures Discussion of building materials and their advantages and disadvantages Glossary of museum and design terms for easy reference Bogle has translated her years of experience as an exhibition planner into a guide for practitioners of all sizes and levels of experience. For the solo practitioner, perhaps working with limited or no staff in a small institution, Bogle walks through every task that will be faced as the project develops. For the staff member of a larger institution or firm, this book serves as a checklist, reinforcing the instruction that comes from peers and previous experience. Museum Exhibition Planning and Design is a useful tool for anyone interested in or involved in bringing their exhibits to life.

The PhD Thesis covers a review of sanitation technology options for urban slums including existing technologies, their application status and the knowledge gaps. A novel method for selection of sustainable sanitation technologies in urban slums is presented as an alternative to software applications. This method promotes holder participation and ensures sustainability of the selected and

implemented sanitation systems. Furthermore, this PhD research provided an insight into the genomic copy concentrations of selected waterborne viruses in a typical urban slum and the magnitude of microbial risks to human health caused by pathogens (bacteria and waterborne viruses through various exposure pathways. The results show that urban slum environments are polluted and the disease burden from each of the exposure routes. In addition, the grey water production in urban slums is more than 80% of the water consumption and the grey water pollutant loads pose potential public health and environmental impacts. The PhD thesis also covers aspects of optimisation of the filtration medium during grey water treatment by uPVC filter columns in series and parallel mode. In addition, the study demonstrated that grey water treatment using a two-step crushed lava rock filter unit at household level in an urban slum is feasible. The grey water pollutant loads reduced by 50% to 80% after grey water treatment. The main conclusions on sanitation in unsewered urban poor areas and recommendations for future research are included in this PhD thesis.

In Four Practical Revolutions in Management: Systems for Creating Unique Organizational Capability, authors Shoji Shiba and David Walden significantly revise their classic text on leading management systems -- A New American TQM. This book is a comprehensive approach to business management that goes beyond business operations improvement. The authors demonstrate a program for establishing a sophisticated, state-of-the-art management system that creates unique organizational capabilities. Containing new methodologies and case studies, the book is one of the most extensive in the management field and provides a step-by-step program for implementing leading management techniques. To create a successful management system, the authors argue that companies must be organized around four major areas of practice called the "four revolutions."

They are customer focus, continuous improvement, total participation, and societal networking. For each of the areas, the book presents proven methods that enable dynamic implementation strategies. Customer Focus Any effective management system begins with the customer. Companies must learn to integrate a customer's concerns into their own. The book presents how to embrace the "market-in" concept and integrate the other skills in the book into a management strategy that focuses on the customer. Continuous Improvement For a company to be successful in the 21st century, it must continually improve its processes to meet the ever-changing needs of the customer. This book introduces important tools for process discovery, management, and improvement. In the process, it moves beyond "reactive improvement" methods to "proactive improvement" efforts. Total Participation The key to creating a dynamic management system is employee participation. Employees are the ones who work on the issues of quality and customer satisfaction on a daily basis. This book presents skills such as hoshin management, team-building, creating structures for mobilization, and leading change and breakthrough. Societal Networking Besides a company's internal audience, another source of business improvement ideas is societal networking. This is the set of companies, customers, and suppliers associated with any organization, that can learn from the experiences of these groups. To develop these valuable resources into a comprehensive management strategy, the book covers "mutual learning" methods, as well as keys for integrating various management methodologies. This book includes: Hoshin management PDCA (plan, do, check, act) cycle 7-step method of reactive improvement Proactive improvement to develop new products Engaging people in a changing environment Focused strategies for phase-in Leading process improvement The practice of breakthrough Over thirty thorough case studies

Numerical procedures based on the 2-D and 3-D full potential equations and the 2-D Navier-Stokes equations were developed to study the effects of leading and trailing edge flap motions on the aerodynamics of parallel airfoil-vortex interactions and on the aerodynamics and acoustics of the more general self-generated rotor blade vortex interactions (BVI). For subcritical interactions, the 2-D results indicate that the trailing edge flap can be used to alleviate the impulsive loads experienced by the airfoil. For supercritical interactions, the results show the necessity of using a leading edge flap, rather than a trailing edge flap, to alleviate the interaction. Results for various time dependent flap motions and their effect on the predicted temporal sectional loads, differential pressures, and the free vortex trajectories are presented. For the OLS model rotor, contours of a BVI noise metric were used to quantify the effects of the trailing edge flap on the size and directivity of the high/low intensity noise region(s). Average reductions in the BVI noise levels on the order of 5 dB with moderate power penalties on the order of 18 pct. for a four bladed rotor and 58 pct. for a two bladed rotor were obtained.
